

NOVO RESOURCES CORP.

(TSX: NVO; OTCQX: NSRPF)

MANAGEMENT'S DISCUSSION AND ANALYSIS

FOR THE SIX-MONTH PERIOD ENDED JUNE 30, 2022

MANAGEMENT'S DISCUSSION AND ANALYSIS

The following management's discussion and analysis ("**MD&A**") of the results of operations and financial condition of Novo Resources Corp. (the "**Company**" or "**Novo**"), prepared as of August 15, 2022, should be read in conjunction with the condensed interim consolidated financial statements of Novo for the six months ended June 30, 2022 (the "**Q2 Financial Statements**") and accompanying notes thereto. The Q2 Financial Statements are prepared in accordance with IAS 34 *Interim Financial Reporting* ("**IAS 34**") as issued by the International Accounting Standards Board ("**IASB**"). This MD&A includes the results of the Company's subsidiaries, Novo Resources (USA) Corp., Conglomerate Gold Exploration (B.V.I.) Ltd., Karratha Gold Exploration (B.V.I.) Ltd., Conglomerate Gold Exploration Pty. Ltd., Nullagine Gold Pty. Ltd., Beatons Creek Gold Pty. Ltd., Grant's Hill Gold Pty. Ltd., Karratha Gold Pty. Ltd., Rocklea Gold Pty. Ltd., Meentheena Gold Pty. Ltd., Farno-McMahon Pty. Ltd., and Millennium Minerals Pty. Ltd. ("**Millennium**").

In this MD&A:

"**H1 2023**" means the six months ending June 30, 2023.

"**Fiscal 2022**" means the fiscal year ending December 31, 2022.

"**Q1 2022**" means the three-month period ended March 31, 2022.

"**Q2 2022**" means the three-month period ended June 30, 2022.

"**H1 2022**" means the six-month period ended June 30, 2022.

"**Q3 2022**" means the three-month period ending September 30, 2022.

"**Fiscal 2021**" means the fiscal year ended December 31, 2021.

"**Q1 2021**" means the three-month period ended March 31, 2021.

"**Q2 2021**" means the three-month period ended June 30, 2021.

All amounts are expressed in Canadian dollars unless otherwise stated, and all values are rounded to the nearest thousand dollars (\$'000), unless otherwise noted. Additional information relating to the Company, including the Company's annual information form for the year ended December 31, 2021, is available under the Company's profile on SEDAR at www.sedar.com.

Certain non-IFRS financial performance measures are included in this MD&A. The Company believes that these measures, in addition to measures prepared in accordance with IFRS, provide readers with an improved ability to evaluate the Company's underlying performance and compare its results to other companies. These measures are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. These measures do not have any standardized meaning prescribed under IFRS, and therefore may not be comparable to similar measures presented by other issuers. The non-IFRS financial performance measures included in this MD&A are average realized price, total cash costs, all-in sustaining costs ("**AISC**"), earnings before interest, taxes, depreciation and amortization ("**EBITDA**"),

free cash flow, adjusted earnings and adjusted basic and diluted earnings per share, available liquidity, working capital, and Credit Facility (as defined below) adjusted working capital. Refer to the *Non-IFRS Measures* section for further details and reconciliations of such non-IFRS measures.

Dr. Quinton Hennigh (P.Geo.) is the qualified person, as defined under National Instrument 43-101 *Standards of Disclosure for Mineral Projects* (“**NI 43-101**”), responsible for, and having reviewed and approved, the technical information contained in this MD&A unless indicated otherwise. Dr. Hennigh is the non-executive co-chairman and a director of Novo.

FINANCIAL AND OPERATING HIGHLIGHTS

Second Quarter 2022 Summary

- No lost time injuries were recorded at the Beatons Creek gold project in the Nullagine region of Western Australia (the “**Beatons Creek Project**”) or across the Company’s exploration properties through Q2 2022.
- Exploration efforts continued through Q2 2022, with HQ drilling at the Genie target at the Nullagine gold project (“**NGP**”) and RC drilling at the Malmsbury Project in Victoria.
- Regional exploration focussed on Ni-Cu targets across the Andover intrusive complex at Purdy’s North and orogenic gold targets at the Egina project.
- Production to pause at the Beatons Creek Project and the Golden Eagle processing facility (“**Golden Eagle Plant**”), with mining of the Oxide mineral resource ending in Q3 2022 followed by a phased wind-down of operational activities finishing by the end of October 2022².
- 398,830 tonnes of mineralized material were processed through the Company’s Golden Eagle Plant, which represented a significant increase from 366,301 tonnes in Q2 2021 and a minor increase from 394,382 tonnes in Q1 2022.
- Average head grade was 1.02 g/t Au, which represented a decrease from 1.30 g/t Au in Q2 2021 and 1.15 g/t Au in Q1 2022.
- Gold recoveries averaged 93.48%, which was in line with recoveries of 93.65% achieved during Q1 2021 but a notable increase from recoveries of 91.40% achieved in Q1 2022.
- 12,610 ounces of gold were produced, which represented a decrease in gold production from 14,890 ounces in Q2 2021 subsequent to the Company’s inaugural gold pour in February 2021³ and from 13,378 ounces in Q1 2022.
- Revenue of \$29.7 million was generated from the sale of 12,378 ounces of gold at an average realized price¹ of \$2,400 / A\$2,635 / US\$1,880, which represented a slight decrease from revenue of \$31.7 million in Q2 2021 and revenue of \$31.9 million in Q1 2022.
- EBITDA¹ was \$(3.5) million, and adjusted EBITDA¹ was \$(21.8) million.
- Adjusted earnings¹ (losses) of \$(37.1) million or \$(0.15) per share compared to adjusted earnings / (losses)¹ of \$(19.2) million or \$(0.08) per share in Q2 2021 and \$(13.6) million or \$(0.06) per share in Q1 2022.

¹ Refer to Non-IFRS Measures on page 36 below.

² Refer to the Company’s news release dated [June 14, 2022](#).

³ Refer to the Company’s news release dated [February 16, 2021](#).

- Total cash costs¹ of \$2,598 / A\$2,852 / US\$2,035 per ounce of gold compared to \$2,003 / A\$2,118 / US\$1,631 per ounce in Q2 2021 and \$2,195 / A\$2,392 / US\$1,733 per ounce in Q1 2022.
- AISC¹ of \$3,198 / A\$3,510 / US\$2,505 per ounce of gold compared to \$2,604 / A\$2,753 / US\$2,120 per ounce in Q2 2021 and \$2,842 / A\$3,097 / US\$2,244 per ounce in Q1 2022.
- Cash and cash equivalents totaled \$74.9 million as at June 30, 2022, up from \$32.5 million as at December 31, 2021 and \$21.9 million as at March 31, 2022 subsequent to the sale of the first tranche of shares of New Found Gold Corp. (TSXV: NFG) ("**New Found**") held by the Company (refer to *Significant Business Developments & Outlook – Investment in New Found Gold Corp.* below).
- Aggregate current and non-current marketable securities totaled \$57.9 million as at June 30, 2022, down from \$135.2 million as at March 31, 2022 as a result of the sale of the first tranche of the Company's New Found shares (refer to *Significant Business Developments & Outlook – Investment in New Found Gold Corp.* below) and a general decrease in value of the Company's investments.
- \$16.3 million financial asset recognized as at June 30, 2022, representing the fair value of the forward contract recognized for the second tranche of the New Found share sale which subsequently completed on August 5, 2022⁴ (refer to *Significant Business Developments & Outlook – Investment in New Found Gold Corp.* below).

H1 2022 Summary

- No lost time injuries were recorded at the Beatons Creek Project or across the Company's exploration properties through H1 2022.
- 793,212 tonnes of mineralized material were processed through the Company's Golden Eagle Plant, which represented a significant increase from 515,881 tonnes in H1 2021.
- Average head grade was 1.09 g/t Au, which represented a decrease from 1.24 g/t Au in H1 2021.
- Gold recoveries averaged 92.45%, which was in line with recoveries of 93.38% achieved during H1 2021.
- 25,988 ounces of gold were produced, which represented an increase in gold production from 18,387 ounces in H1 2021 subsequent to the Company's inaugural gold pour in February 2021³.
- Revenue of \$61.6 million was generated from the sale of 25,742 ounces of gold at an average realized price¹ of \$2,394 / A\$2,618 / US\$1,883, which represented an increase from revenue of \$39.4 million from the sale of 17,456 ounces of gold in H1 2021.
- EBITDA¹ was \$(6.3) million, and adjusted EBITDA¹ was \$(25.3) million.
- Adjusted earnings¹/(losses) of \$(50.7) million or \$(0.20) per share compared to adjusted earnings / (losses)¹ of \$(31.1) million or \$(0.13) per share in H1 2021.
- Total cash costs¹ of \$2,307 / A\$2,523 / US\$1,815 per ounce of gold compared to \$1,846 / A\$1,919 / US\$1,481 per ounce in H1 2021.
- AISC¹ of \$2,930 / A\$3,204 / US\$2,304 per ounce of gold compared to \$2,771 / A\$2,880 / US\$2,222 per ounce in H1 2021.

On August 12, 2022, the Company completed repayment of its US\$40 million senior secured credit facility (the "**Credit Facility**") with Sprott Resource Lending Corp⁵. ("**Sprott Lending**") by paying an aggregate amount of US\$40,144,029 (\$51,316,000) to Sprott Lending in satisfaction of all amounts

⁴ Refer to the Company's news release dated [August 5, 2022](#).

⁵ Refer to the Company's news release dated [August 12, 2022](#).

outstanding, including all accrued interest. No early repayment penalties were paid. As at the date of this MD&A, the Company is in the process of discharging all security previously granted to Sprott Lending in connection with the Credit Facility.

OVERVIEW OF NOVO

The Company was incorporated on October 28, 2009 pursuant to the *Business Corporations Act* (British Columbia) as Galliard Resources Corp. On June 27, 2011, the Company changed its name from Galliard Resources Corp. to Novo Resources Corp. The Company's common shares trade on the Toronto Stock Exchange (the "TSX") under the ticker symbol "NVO" and in the United States on the OTC Market Group's OTCQX International Exchange under the symbol "NSRPF".

The Company is engaged primarily in the business of evaluating, acquiring, exploring, developing, and mining natural resource properties with a focus on gold and battery metals. The Company holds approximately 11,000 sq km of land in the Pilbara region of Western Australia and has an extensive exploration program designed to aggressively advance its targets, including the development of mechanical sorting technology. The Company has exploration joint venture interests in Victoria, Australia, and also holds equity investments in a number of companies. In June 2022, the Company announced that it would wind-down operations at its Beatons Creek Project pending receipt of requisite approvals from relevant Western Australian regulatory authorities⁶. The Company's head office is located at Suite 880, 580 Hornby Street, Vancouver, British Columbia, V6C 3B6, Canada. The Company's operational office and corporate staff are located at Level 1, 46 Ventnor Avenue, West Perth, Western Australia, 6005, Australia.

SIGNIFICANT BUSINESS DEVELOPMENTS & OUTLOOK

Beatons Creek Project

During Q2 2022, the Company produced 12,610 ounces of gold, 398,830 tonnes of mineralized material were processed in Q2 2022 at a grade of 1.02 g/t Au⁷.

Head grades at the Beatons Creek Project have been relatively variable and, on average, lower than originally forecast. The lower head grades compared to forecast are due to previous reliance on wide-spaced grade control drilling which results in lower accuracy of the modelled high-nugget effects in the Beatons Creek Project oxide mineral resource combined with higher mining dilution associated with more complex mining areas.

In May 2021, the Company successfully partnered with Intertek Testing Services (Australia) Pty Ltd ("Intertek")⁸ and commissioned an on-site lab at the Beatons Creek Project. Novo has secured the use of two Chrysos PhotonAssay units at Intertek's facility in Perth, Western Australia, which has enabled expedited assay turnaround times. As a result, Novo has been able to move from previous wide-spaced grade control drilling to 10 m x 10 m drilling relatively efficiently. The much closer-spaced drilling and rapid assays allowed greater certainty in grade forecasting for mine planning and the Company continues to progress its Beatons Creek Project grade control drilling program at a spacing of 10 m x 10 m. Analysis confirms that this level of grade control drilling provides improved reconciliation between the resource model grade and the actual grade mined.

⁶ Refer to the Company's news releases dated [June 14, 2022](#) and [July 11, 2022](#).

⁷ Refer to the Company's news release dated [July 6, 2022](#).

⁸ Refer to the Company's news release dated [May 18, 2021](#).

The PhotonAssay technique is beneficial given the high-nugget nature of the Beatons Creek Project conglomerate gold mineralization, and the rapid assay turnaround supports the use of closer-spaced grade control drilling.

In June 2022, the Company announced an operational pause at the Beatons Creek Project⁹. Despite optimization activities for the Oxide mineral resource, mined grade continues to deliver marginal cashflow and grade control drilling has defined the extent of economic Oxide material which could be mined. Novo believes that economic mining and processing of the Oxide mineral resource can be extended for an additional quarter from the three-phase mine plan outlined in December 2021¹⁰ and will now continue to the end of Q3 2022. However, the transition to the Golden Eagle deposit and the Beatons Creek Project Fresh mineral resource cannot occur immediately as previously anticipated. As such, following completion of Oxide mining, the Company will pause production operations at Beatons Creek and the Golden Eagle Plant, with a controlled and phased wind-down of operational activities.

The Company expects production to recommence in approximately 12-18 months, following receipt of required approvals for the Fresh mineral resource and completion of a final investment decision (“**FID**”) post receipt of the results from a feasibility study planned for the Beatons Creek Project Fresh mineral resource (the “**Feasibility Study**”). Importantly, Novo has developed a detailed development and exploration plan during this period, which includes further definition and extension drilling of the Fresh mineral resource and resource definition drilling of near-mine targets, with a primary focus on the Mosquito Creek Oxide and Sulphide targets to extend the greater Nullagine gold project (“**Nullagine**”) beyond the Beatons Creek Project.

Building upon recent knowledge gained during mining activities completed at the Grant’s Hill deposit, which forms part of the Beatons Creek Project, Novo has been undertaking 20 m by 20 m resource definition RC drilling across key areas at Grant’s Hill, which contains the majority of the known Fresh mineralization.

This drill program commenced at the end of October 2021, with the Company accelerating drilling in January 2022 through three RC drill rigs. At the end of May 2022, approximately 31,700 m (397 holes), with an average depth of 80 m per hole, were drilled into the Grant’s Hill project area.

Drilling at Grant's Hill has been systemically trending in a north-westerly direction from the Oxide open pit boundary, testing the extent of the known mineralization (“**lodes**”) identified in the previously released mineral resource estimate¹¹. Whilst the natural topography and landscape has presented some challenges, the drill coverage was designed to test as many lodes as possible (Figures 1 & 2 below). To date, drilling programs have achieved good spatial coverage reaching up to 400 m in width and 600 m in length. These drill programs have been targeting known lodes including the M0, M1, M2 and M3, with the primary focus targeting the well-endowed M1 and M2 lodes.

⁹ Refer to the Company’s news release dated [June 14, 2022](#).

¹⁰ Refer to the Company’s news release dated [December 13, 2021](#).

¹¹ Refer to the Company’s news release dated [April 30, 2021](#) and the report titled “Preliminary Economic Assessment on the Beatons Creek Gold Project, Western Australia” (the “**PEA**”) with an effective date of February 5, 2021 and an issue date of April 30, 2021. The mineral resource estimate in the PEA has not been adjusted for depletion. **Mineral resources that are not mineral reserves do not have demonstrated economic viability.**

Figure 1: Grant's Hill Fresh mineral resource definition RC drilling

To gain further confidence in the lodes, a 30,400 sq m area was drilled at a 10 m by 10 m spacing immediately adjacent to the recently mined Grant's Hill pit. This drilling comprised 73 holes for 5,080 m drilled, in addition to the already drilled 20 m by 20 m pattern (Figure 2 below).

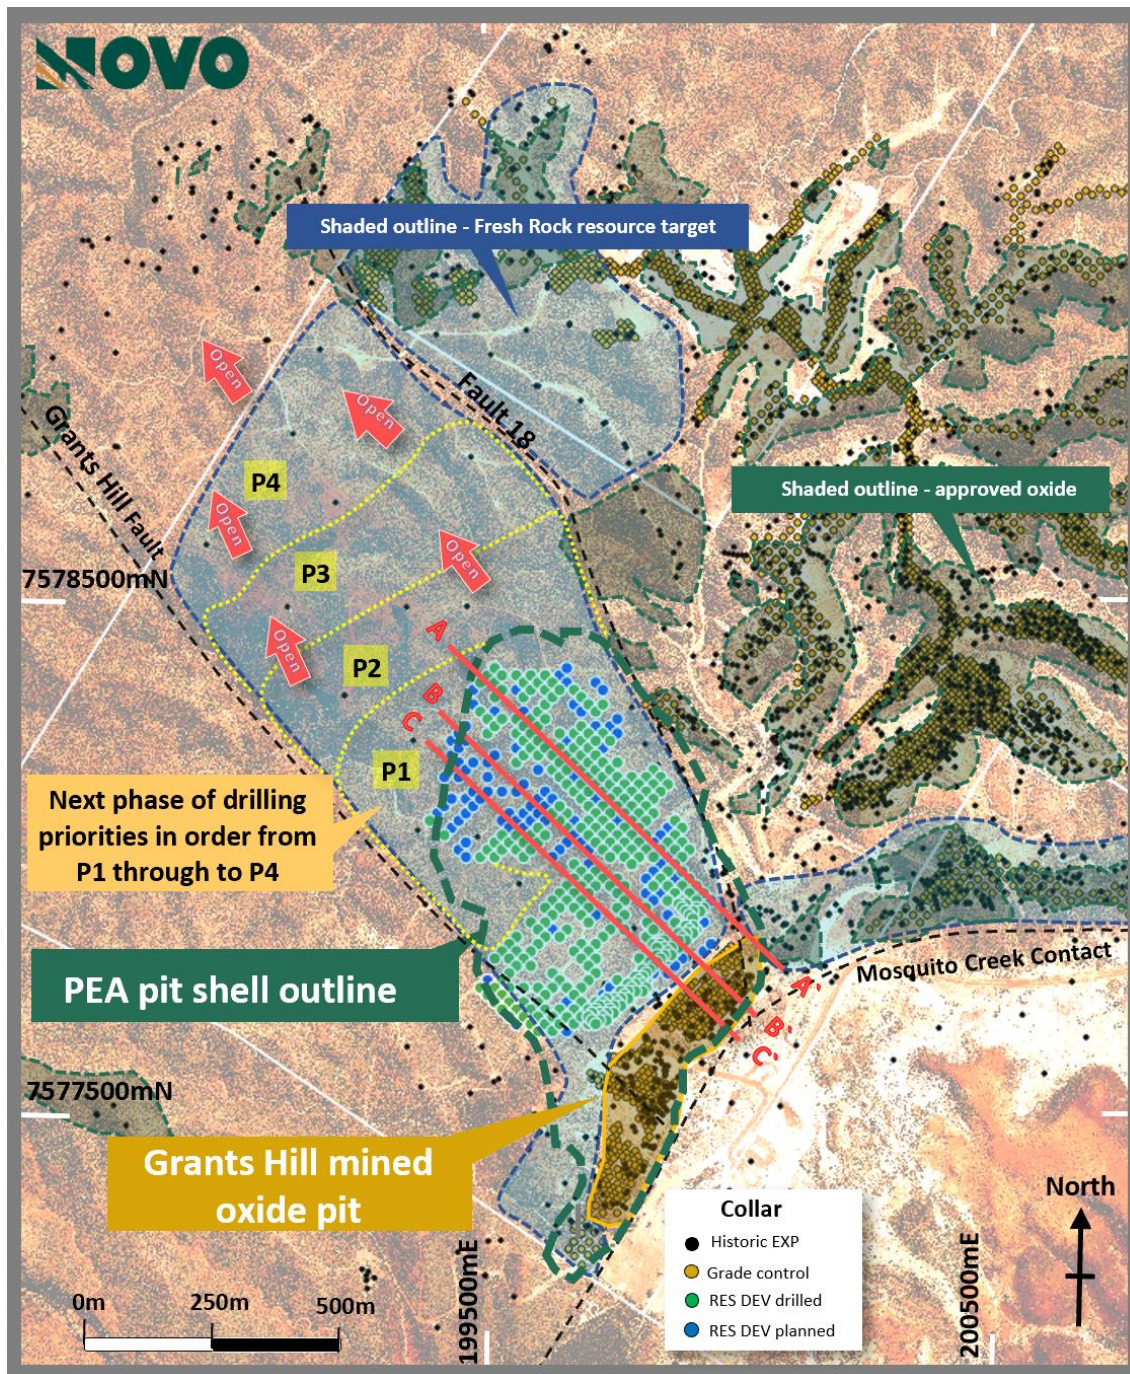

Figures 3, 4 and 5 illustrate the lodes intersected by recent resource definition drilling, along with drilling results received to date. Results are encouraging, indicating that the principal M1 and M2 lodes remain open and continuous along plunge. These results also confirm the thickness and tenor of the mineralization intercepted in prior drilling programs⁹.

Beatons Creek Resource Extension Drilling

The significance of the resource definition results allows Novo to plan for the next phases of drilling, extending drill coverage in a north-westerly direction with an expectation to grow the current Beatons Creek Resource (defined below) (Figure 2 below shows priority 1 to priority 4 phases). The next stage of resource extension drilling will be targeting areas of existing sparse drilling information and planned drilling aims to increase resource confidence, through the upgrade of current inferred mineral resources and unclassified mineralization.

The resource extension drilling program will be completed in a staged approach, targeting higher-priority areas in the first instance and progressing to lower priority areas to potentially grow the inferred mineral resource³ and inform further studies and life-of-mine planning.

The drilling program will continue for the remainder of Fiscal 2022 and into H1 2023 and is expected to define the updated extent of the Beatons Creek Project Fresh mineral resource.

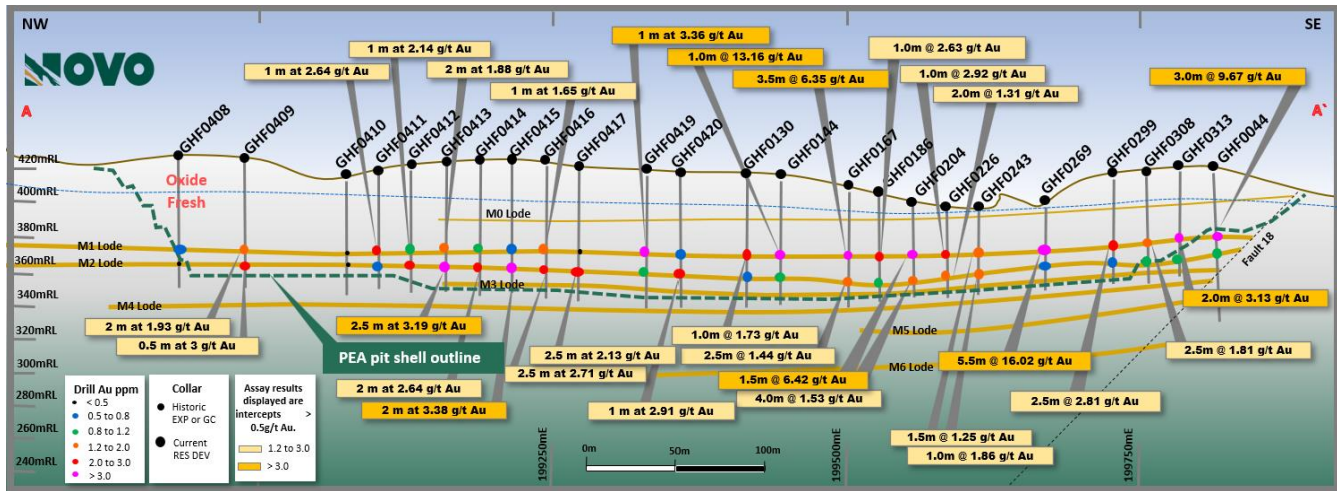

Figure 3: Section view A-A' Beatons Creek Project Fresh mineral resource definition and extension programs

Figure 4: Section view B-B' Beatons Creek Project Fresh mineral resource definition and extension programs

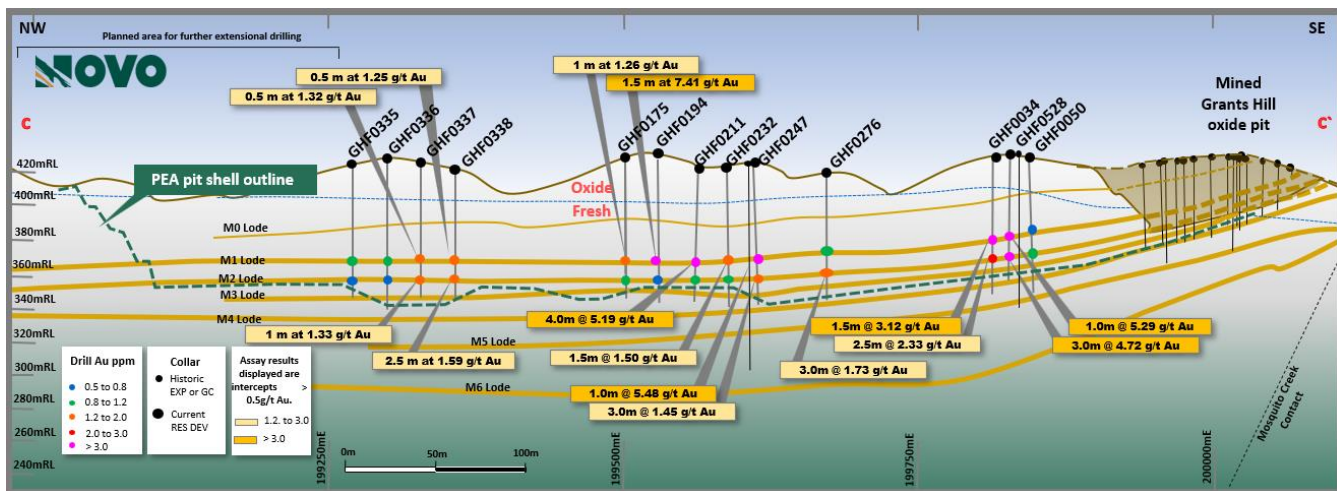

Figure 5: Section view C-C' Beatons Creek Project Fresh mineral resource definition and extension programs

The results from the resource definition and extension drilling program will inform an update to the Beatons Creek Resource (defined below), with the upgraded Beatons Creek Resource (defined below) providing the foundation for the Feasibility Study.

Data collection and analysis programs are underway to better define parameters for:

- Metallurgical recoveries and an optimization of the Golden Eagle Plant
- Geotechnical, hydrogeological and hydrological conditions to be encountered in the open pits
- Geochemical properties of the various materials being mined to ensure they are appropriately managed during and post-mining operations at the Beatons Creek Project

Other key studies which have also commenced include:

- Updated Beatons Creek Project mine and waste dump designs incorporating management of any potential for acid mine drainage and mine closure commitments
- Improved understanding of the metallurgical performance of the Beatons Creek Project Fresh mineralized material through the Golden Eagle Plant and optimum throughput rates, as previously reported¹²
- Definition of an economic provision for additional tailings storage capacity to accommodate processing of Beatons Creek Project Fresh mineralized material
- Determining the suitability of current Beatons Creek Project infrastructure required to support mining and processing of the Fresh mineralized material, including consideration of renewable energy options for power generation and/or supply
- Review of water supply options and water balance management plans
- Mining and processing schedules
- Capital and operating cost estimates and life-of-mine cash flow forecasts
- Development of an economic mine plan and the reporting of a mineral reserve estimate in a technical report under National Instrument 43-101 *Standards of Disclosure for Mineral Projects* (“NI 43-101”)

The Company most recently announced an updated mineral resource estimate in March 2021¹³ outlining indicated mineral resources comprising 6.6 million tonnes at 2.1 g/t Au for 457,000 oz contained gold, with additional inferred mineral resources of 4.3 million tonnes at 3.2 g/t Au for 446,000 oz contained gold (the “**Beatons Creek Resource**”). Reference should be made to the 2021 Technical Report which is available under the Company’s profile on SEDAR at www.sedar.com.

The Beatons Creek Resource is as follows, not taking into account any Beatons Creek Resource mineralized material mining depletion in 2021 and 2022:

¹² Refer to the Company’s news releases dated [October 12, 2021](#) and [April 7, 2022](#).

¹³ Refer to the technical report prepared pursuant to NI 43-101. The independent technical report, entitled “Preliminary Economic Assessment on the Beatons Creek Gold Project, Western Australia” (the “**2021 Technical Report**”), with an effective date of February 5, 2021 and an issue date of April 30, 2021, was prepared for Novo by Jason Froud (BSc Hons, Grad Dip (Fin Mkts), MAIG), Andrew Grubb (BE (Mining), FAusIMM), and Ian Glacken (BSc Hons, MSc (Mining Geology), MSc (Geostatistics) PGCert (comp), DIC, FAusIMM(CP), FAIG, CEng, MIMMM) of Optiro Pty Ltd of Perth, Australia, and William George Gosling (BE (Extractive Metallurgy), FAusIMM) of GR Engineering Services, also of Perth, Australia (collectively, the “**QPs**”). The QP’s are qualified persons as defined under NI 43-101. The 2021 Technical Report is available under the Company’s profile on the SEDAR website at www.sedar.com (filing date: April 30, 2021) and on the Company’s website at www.novoresources.com.

Open Pit Mineral Resources (oxide and fresh mineralization)

	Cut-off Grade	Tonnes	Grade	Ounces Troy Au
Classification	Au g/t	(x1000)	Au g/t	(x1000)
Indicated	0.5	6,645	2.1	457
Inferred	0.5	3,410	2.7	294

Open Pit Mineral Resources (oxide mineralization)

	Cut-off Grade	Tonnes	Grade	Ounces Troy Au
Classification	Au g/t	(x1000)	Au g/t	(x1000)
Indicated	0.5	4,500	1.9	272
Inferred	0.5	765	1.8	44

Open Pit Mineral Resources (fresh mineralization)

	Cut-off Grade	Tonnes	Grade	Ounces Troy Au
Classification	Au g/t	(x1000)	Au g/t	(x1000)
Indicated	0.5	2,145	2.7	185
Inferred	0.5	2,645	2.9	250

Underground Mineral Resources (fresh mineralization)

	Cut-off Grade	Tonnes	Grade	Ounces Troy Au
Classification	Au g/t	(x1000)	Au g/t	(x1000)
Inferred	3.5	885	5.3	152

Total Mineral Resources (oxide and fresh mineralization; open pit and underground)

	Cut-off Grade	Tonnes	Grade	Ounces Troy Au
Classification	Au g/t	(x1000)	Au g/t	(x1000)
Indicated	0.5	6,645	2.1	457
Inferred	0.5, 3.5	4,295	3.2	446

Notes:

1. Open pit mineral resources contain oxide and fresh mineralization within an optimized shell and constrained within a mineralized wireframe.

2. An optimized Whittle pit shell was estimated with the following indicative parameters:

- (a) USD \$1,311 (AUD \$1,850) / troy ounce;
- (b) Metallurgical recoveries of 95% oxide and 90% fresh;
- (c) SGs applied: Oxide 2.40 t/m³ and fresh 2.85 t/m³ based on measurements taken on drill core;
- (d) USD \$2.40 / tonne mining cost for oxide and USD \$3.68 / tonne for fresh;
- (e) USD \$17.00 / tonne Oxide and USD \$19.00 / tonne fresh processing cost; and
- (f) USD \$3.00 / tonne general and administrative costs.

3. Underground mineral resources contain fresh mineralization outside the optimized shell. Underground resources are constrained to discrete areas of contiguous mineralization. NB: cut-off grade for underground resource has been increased from 2.0 g/t Au to 3.5 g/t Au for the 2021 Technical Report.

4. Columns may not total due to rounding.

5. One troy ounce is equal to 31.1034768 grams.

Mineral resources that are not mineral reserves do not have demonstrated economic viability.

In July 2021, a test package of approximately 43 kt of Beatons Creek Project fresh mineralization was processed at an average head grade of 1.83 g/t Au¹⁴. An additional test package of approximately 60 kt of Beatons Creek Project fresh mineralization was processed in March 2022 at an average head grade of 1.75 g/t Au⁷. This data will be used to optimize fresh mining in the future. The Beatons Creek Resource includes a fresh component comprising approximately 65% of the global estimate¹³.

Beatons Creek Project Outlook

The Company expects to produce 9 – 11 koz Au from the Beatons Creek Project in Q3 2022, with drawdown of inventory expected to add an additional 1 koz Au in Q4 2022 as Phase One Oxide operations at the Beatons Creek Project wind down through October 2022⁷. This forecast is subject to the Company's ability to manage the impact to operations from COVID-19.

The Fresh mineral resource accounts for 65% of the total Beatons Creek Resource¹³. Phase Two of operations, which focuses on the Beatons Creek Project Fresh mineral resource and is forecast to start in the next 12-18 months subject to approvals, is expected to be supported by higher grades and lower unit costs.

Delivery of Phase Two production will be underpinned by completion of key workstreams over the next 12 months, which include the following:

- Feasibility Study, which is underway and scheduled for completion in mid-Q4 2022:
 - Expectation to report mineral reserve based on updated mineral resource
 - Study focused on optimizing life of mine costs for haulage, power, water (including water balance management) and tailings storage
 - Metallurgical and geotechnical diamond drilling programs have recently been completed
 - Other key studies underway and progressing as planned
- Completion of Phase One of a reverse circulation (“RC”) drilling program to deliver an upgraded mineral resource:
 - Results to be used in a mineral resource update, which will form the basis of the Feasibility Study
- Resource definition and extension drilling programs for the Fresh mineral resource. Programs have commenced and will continue for the remainder of Fiscal 2022 and into H1 2023
 - Program to be completed in stages, targeting higher priority areas in the first instance and progressing to lower priority targets
 - Significant assay results to date provide Novo with an excellent platform to plan future stages of drilling
 - Focused on growing inferred mineral resource, informing further studies and life-of-mine planning

Delivery of Phase Two will play a critical role in executing the long-term vision at NGP, which should see production of the Fresh mineral resource between 2023-2026, with extensional drilling focused on extending production post 2026, along with exploration and development work at Mosquito Creek. Mining of the Fresh mineral resource is subject to receipt of approvals and a FID post receipt of the results from the Feasibility Study.

¹⁴ Refer to the Company's news release dated [October 12, 2021](#).

Golden Eagle

Novo has completed confirmatory resource drilling and metallurgical testing to evaluate the potential to expand the historical Golden Eagle pit. Unfortunately, this work confirmed the geological complexity of Golden Eagle mineralization and also confirmed historic studies that Golden Eagle material requires the Golden Eagle Plant to be expanded to include a flotation circuit and associated components. The Company's review has also confirmed that a mining restart of the Golden Eagle pit requires approval from relevant Western Australian government agencies. A decision has yet to be made whether the Company will progress further resource drilling and technical studies.

Long-Term Production Potential at Mosquito Creek

Novo has developed and is implementing a refractory (Sulphide) strategy at Mosquito Creek to target production at Nullagine post-Phase Two mining of the Fresh mineral resource.

Historical work completed by Millennium (prior to being acquired by Novo¹⁵) successfully identified extensive Sulphide mineralization at Mosquito Creek at several targets and importantly, the majority of Sulphide mineralization is accessible by expansion of existing Mosquito Creek Oxide pits including Golden Eagle and Golden Gate. Historical work also indicated good gold recovery using fine grinding and flotation, which would require expansion of existing Golden Eagle Plant.

Exploration programs have been developed to identify potential Oxide mill feed to the Golden Eagle Plant from the Mosquito Creek basin, with follow-up RC drilling programs to commence in H1 2023 at Genie, Parnell-Vulture and Daisy Central, where current drilling has intersected significant, high-grade results¹⁶.

Impairment of the Beatons Creek Project

Each asset or cash generating unit ("CGU") is evaluated at each reporting period to determine whether there are any indications of impairment. If any such indications of impairment exist, a formal estimate of the recoverable amount is performed.

The following indicators of potential impairment were identified in the period ended June 30, 2022:

- (i) the Company's market capitalization has decreased below the Company's net asset value;
- (ii) the current uncertainty regarding the timing of the receipt of the requisite approvals for the Fresh component of the Beatons Creek Project mineral resource; and
- (iii) current indications that the Oxide component of the Beatons Creek Project's estimated economically recoverable mineral resource is not achieving forecast production due to high head grade variability which contributed to the operational wind down of the Beatons Creek Project.

Variable head grades compared to forecast are due to previous reliance on wide-spaced grade control drilling which resulted in lower accuracy of the modelled high-nugget effects in the Beatons Creek Oxide mineral resource, combined with higher mining dilution associated with more complex mining areas. A revised mining approach with continued closer-spaced grade control drilling has been implemented to mitigate this risk to the extent possible.

¹⁵ Refer to the Company's news releases dated [August 4, 2020](#) and [September 8, 2020](#).

¹⁶ Refer to the Company's news release dated [January 28, 2022](#).

The recoverable amount of the CGU is based on a fair value less costs of disposal (“**FVLCD**”) analysis which models the projected discounted cash flows expected to be derived from the Beatons Creek Project. The post-tax nominal discount rate used in the current estimate of recoverable amount is 9.2%. In addition, a 35% adjustment was applied to the currently anticipated production volume of the Fresh component of the Beatons Creek Project to reflect estimated economic recoverability from a mineral resource estimate which includes inferred mineral resources.

The recoverable amount of the CGU was assessed at June 30, 2022, and no further impairment has been recognized.

Assumptions

The projected cash flows used in the FVLCD analysis are affected by changes in assumptions for the \$/oz Au resource multiple, gold price, foreign exchange rates, production volume, and discount rates.

The table below summarises the key assumptions used in the assessment performed at June 30, 2022:

Details	2022	2023	2024	2025	Long-Term
Level 2					
Gold price (US\$/oz)	\$1,871	\$1,798	\$1,749	\$1,733	\$1,657
Foreign exchange rate (USD/AUD)	1.36	1.34	1.34	1.34	1.33
Level 3					
Gold recoveries (%)	92%	92%	92%	92%	92%
Discount rate (post-tax)	9.20%	9.20%	9.20%	9.20%	9.20%
Mineral resource modifying factor	35%	35%	35%	35%	35%

The determination of FVLCD was considered to be a level 3 fair value measurement as it is derived from valuation techniques that include inputs that are not based on observable market data. Any variation in these key assumptions may result in further impairment or lead to a reversal of impairment in future periods.

Exploration Program Update Q2-2022

RC drilling continued at Novo's Pilbara Projects in Q2 2022 finalizing the current brownfields programs at Nullagine before mobilizing to Egina. A series of short HQ diamond holes were also drilled at Genie to be utilized for preliminary metallurgical testwork. Regional reconnaissance programs testing both orogenic gold and battery metal geological models resumed across the wider Pilbara tenement package, in particular at Purdy's North (orogenic gold and battery metals) and Egina (orogenic gold) in the West Pilbara, while initial work in the Elsie district at Nullagine also commenced in earnest.

Diamond drilling continued throughout the quarter at the Malmsbury Project in Victoria at the Company's joint venture with ASX-listed GBM Resources Ltd. (ASX: GBZ)¹⁷. Two additional drill holes were commissioned as immediate follow up to the current program and were still in progress at the end of June 2022.

Throughout April 2022, RC drilling was conducted on high priority Oxide programs at the NGP completing programs at Daisy Central and Parnell with follow up drilling conducted at Genie (western extension) prior to the rig mobilizing across to the West Pilbara Project. RC drill programs testing orogenic vein targets were completed at Egina prior to the rig demobilising in mid-June 2022.

¹⁷ Refer to the Company's news release dated [June 21, 2022](#).

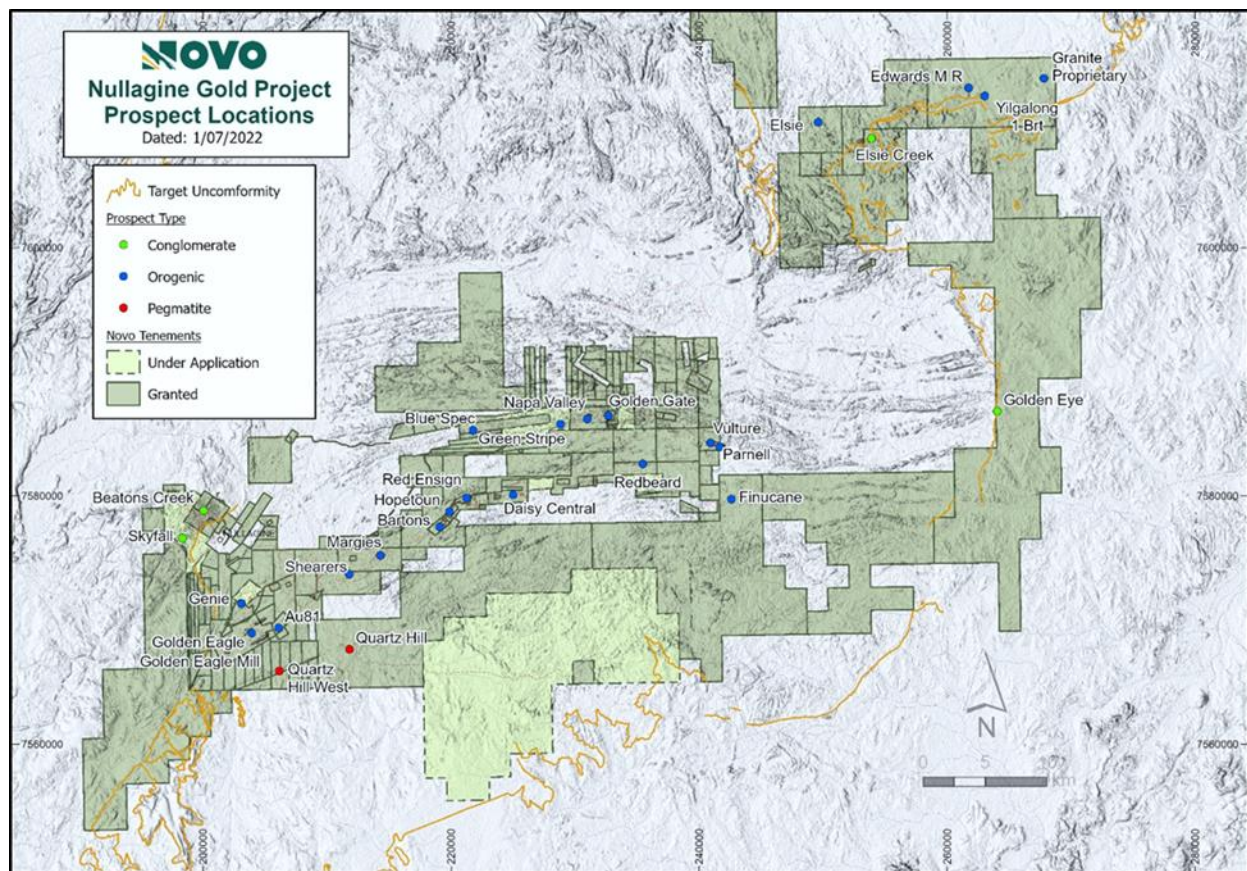

Figure 1: SRTM greyscale image with Novo tenure and prospects in the NGP.

Significant progress has been made on all geophysical programs, to be utilized in direct drill targeting. In the West Pilbara, ground electrical geophysical programs progressed constructively later in the quarter. Induced polarization (“**IP**”) lines across target zones were completed in May testing Ni-Cu/Au-Cu-Co targets at NRV06, Southcourt and Milburn and VHMS targets along the East Well/Bob’s Well trend. A fixed loop transient electromagnetic (“**FLEM**”) survey to better define EM conductors at several prospects was still in progress at the end of June. The high resolution airborne magnetic and radiometric survey is now complete at Andover and Purdy’s North, Egina (eastern sector), Talga, and Miralga. The remaining western areas at Egina, Sherlock Bay, and the Mallina project are expected to be completed early in Q3 2022.

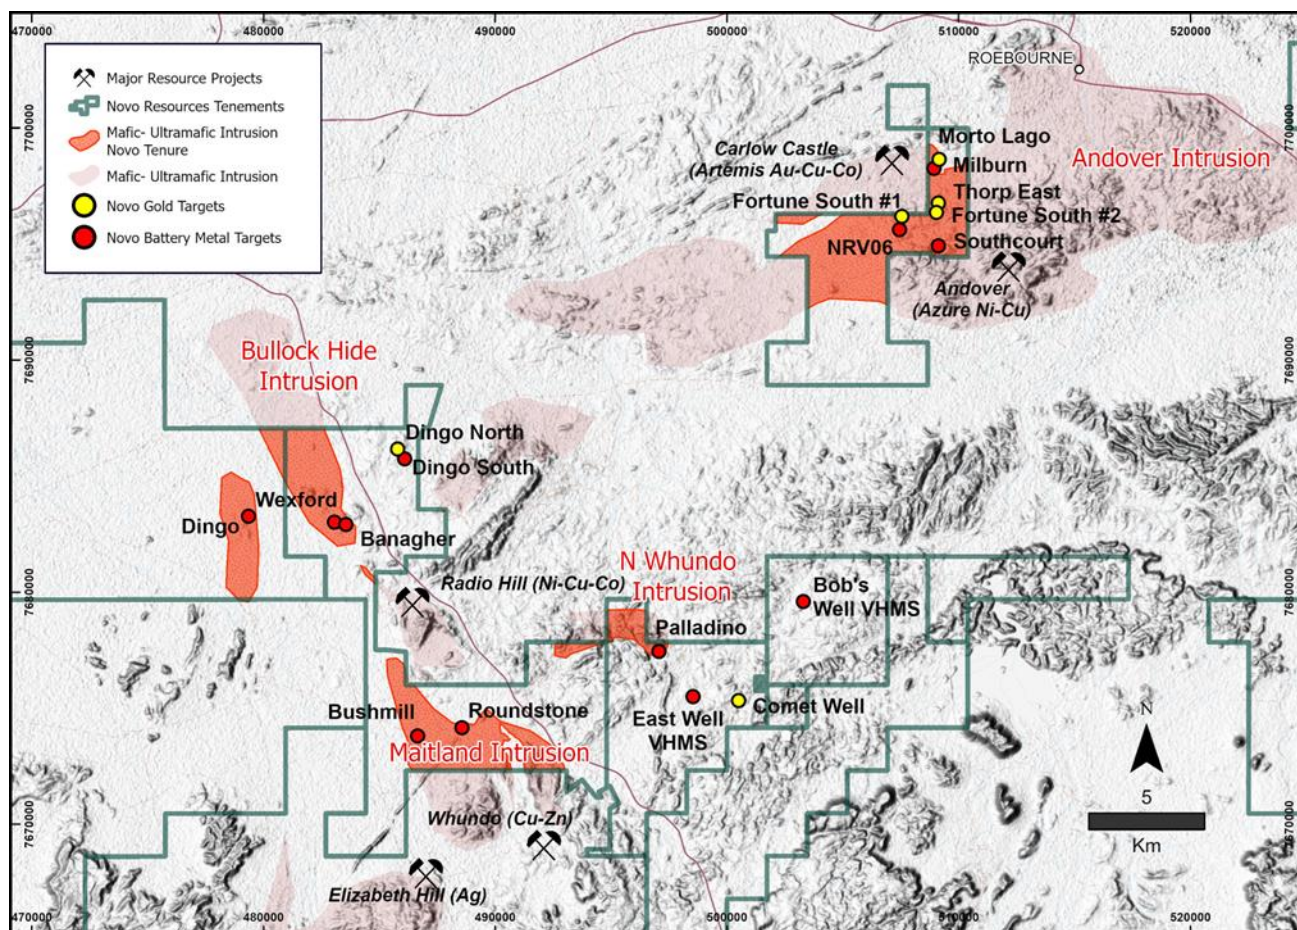

Figure 2: Prospect Locations in the Karratha District - at Purdy's North and the Maitland/Dingo Intrusive.

Drill targeting for RC programs scheduled for Q3 2022 will be completed pending results of this technical work. Follow up mapping and rock chip sampling at Morto Lago, Nunyerry North, and in the Croyden area on additional orogenic targets has also continued. A geological mapping and sampling campaign at the Elsie district, located some 65 km northeast of Nullagine, was also in progress at the end of June.

Heavy unseasonal rainfall fell throughout the northern Pilbara during May and early June 2022, particularly in the West Pilbara and Egina districts (in Karratha, 114.2 mm were recorded in just 2 days, with >200 mm over the month), significantly impacted RC drilling, airborne magnetic surveys, FLEM ground geophysics, and regional exploration. Heritage surveys at both Karratha and Egina have commenced late in Q2 2022 and will be completed in Q3 2022, allowing access for RC and aircore drill programs.

Investment in New Found Gold Corp.

In April 2022, the Company agreed to sell its 15 million shares in New Found to a corporation controlled by Eric Sprott for gross proceeds of \$125.9 million pursuant to arm's length negotiations (the "**New Found Transaction**")¹⁸.

¹⁸ Refer to the Company's news releases dated [April 12, 2022](#), [April 27, 2022](#), and [August 8, 2022](#).

The first tranche of the New Found Transaction, which completed on April 27, 2022, consisted of 8.25 million New Found shares at \$8.35 per share for gross proceeds of \$68.9 million (“**Tranche 1**”)¹⁸. The price per share payable under Tranche 1 represented an 8.7% premium to New Found’s closing price and a 10.1% premium to New Found’s 10-day volume-weighted average price (“**VWAP**”), both immediately prior to the date of announcement of the New Found Transaction.

The second tranche of the New Found Transaction, which completed on August 5, 2022⁴, consisted of 6.75 million New Found shares at \$8.45 per share for gross proceeds of \$57.0 million (“**Tranche 2**”)¹⁸. The price per share payable under Tranche 2 represented a 10.0% premium to New Found’s closing price and an 11.5% premium to New Found’s 10-day VWAP, both immediately prior to the date of announcement of the New Found Transaction.

Sprott Lending waived any event of default which was triggered by Novo’s recent operational pause at its Beatons Creek project in Western Australia² in anticipation of full repayment of the US\$40 million (approximately \$51.4 million) Credit Facility subsequent to completion of the New Found Transaction. The Company completed repayment of the Credit Facility on August 12, 2022 by paying an aggregate amount of US\$40,144,029 (\$51,316,000) to Sprott Lending in satisfaction of all amounts outstanding, including all accrued interest. No early repayment penalties were paid. As at the date of this MD&A, the Company is in the process of discharging all security previously granted to Sprott Lending in connection with the Credit Facility.

In addition to repayment of the Credit Facility, Novo will use the net proceeds from the New Found Transaction to aggressively advance exploration efforts across the Pilbara and Victoria while expediting the Feasibility Study.

SUSTAINABILITY

The Company has committed to releasing an inaugural sustainability statement in 2022 which will outline the Company’s performance to date and plans to continue to operate in a safe and environmentally and socially responsible manner.

Health and Safety

The health and safety of the Company’s employees, contractors, and communities in which Novo operates is paramount. The Company’s 12-month trailing TRIFR decreased from 15.7 as at March 31, 2022 to 10.8 as at June 30, 2022 as the Company continues to enhance its health and safety protocols, behaviours, and culture, particularly during the operational wind-down.

The Company has executed memorandums of understanding and mutual aid agreements with nearby operations and the West Australian Department of Fire and Emergency Services and continues to grow its internal emergency response capabilities. The Company also recently completed a mental health survey for its employees and contractors and is in the process of analyzing its results.

The Company is experiencing an increased impact of COVID-19, particularly with respect to the Company’s workforce and operations. Mandatory isolation for COVID-positive personnel and close contacts is affecting staffing levels for the Company and its contractors, and supply chain issues are causing costs of production to increase, particularly with respect to fuel and other consumables. The Company has also experienced an increase in operational staff turnover subsequent to the announcement of its operational pause at the Beatons Creek Project⁹. The Company is working closely

with its staff and contractors to ensure a safe and orderly transition to the operational pause. It is not possible at this time to predict the impact, if any, that current and future government policies and mandates may have on the Company's operations. Refer to *Risks Related to the Company – COVID-19 and Labour and Employment Matters*.

Environment

The Company works closely with the West Australian regulatory bodies, particularly the Department of Mines, Industry Regulation and Safety ("**DMIRS**"), the Department of Water and Environmental Regulation ("**DWER**"), and the Environmental Protection Authority ("**EPA**"), in order to promote compliance with requisite regulations. Subsequent to the acquisition of Millennium¹⁹, the Company expended significant efforts interfacing with DMIRS and DWER to re-establish lasting and constructive relationships with these departments. The Company recognizes the importance of environmental stewardship, particularly given the Beatons Creek Project's proximity to the township of Nullagine and Millennium's historical rehabilitation liabilities, and prioritizes environmental endeavours, including water stewardship, as it continues to develop the Beatons Creek Project.

On July 11, 2022, the chair of the EPA determined that the Company's approvals submission regarding the Fresh mineralization component of the Beatons Creek Project does not require assessment under Part IV of the Western Australian Environmental Protection Act 1986²⁰. On August 8, 2022, the EPA's decision to not assess was appealed by a local proponent who is seeking to address a limited number of questions relating to potential impacts to groundwater in the Nullagine area. The Company has all technical information readily available to confidently address these questions and is preparing a response to this appeal and expects to resolve it in due course. Importantly, in the case of an appeal against a decision by the EPA to not assess a proposal, the original decision not to assess stands until the appeal is determined. As such, the Company will continue to engage with DMIRS to seek approval to mine the Beatons Creek Fresh mineral resource and expects to make a final investment decision post receipt of results of the Feasibility Study.

Community

As a committed corporate citizen of the Pilbara region of Western Australia, the Company values its relationships with the aboriginal communities and local residents, and communities surrounding the Company's projects. Novo works closely with the nine Aboriginal Groups who hold interests in the Company's vast Pilbara-wide tenure holdings. Novo has also entered into agreements with Aboriginal Groups who have title to the ground comprising the Beatons Creek Project which include commitments to local employment, community support, and royalties.

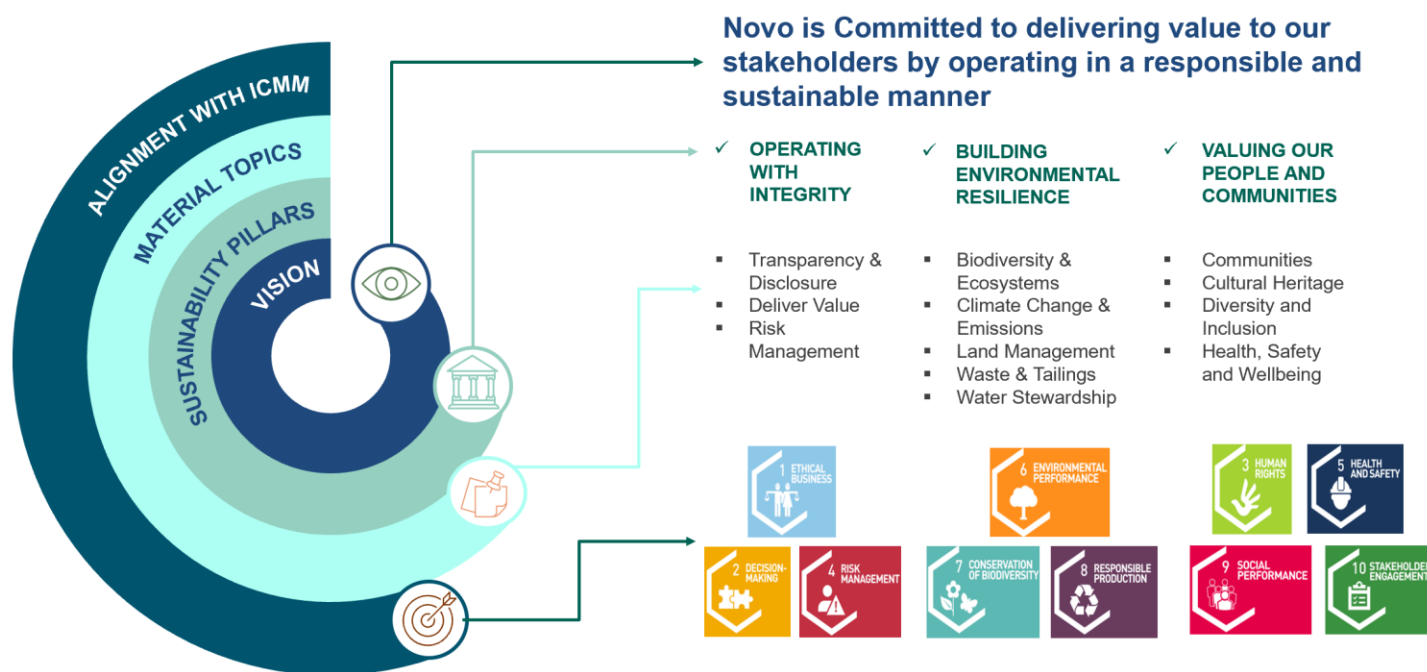

The Beatons Creek Project is located 1 km away from the small town of Nullagine. The Company remains committed to ensuring a safe and orderly operation and has implemented policies to ensure any impact to the town of Nullagine is minimized, including noise and air quality monitoring. The Company is also actively pursuing opportunities to construct a haulage bypass to detour Nullagine and divert its haulage fleet from driving through Nullagine.

The Company also endeavours to invest in its communities outside the parameters of its contractual obligations, including providing support to community, cultural, education, and sport initiatives.

¹⁹ Refer to the Company's news releases dated [August 4, 2020](#), and [September 8, 2020](#).

²⁰ Refer to the Company's news release dated [July 11, 2022](#).

The Company is committed to ESG leadership and advancing critical ESG objectives, with a key focus on becoming a sector-leading performer.

OPERATING RESULTS

		For the three months ended June 30, 2022	For the three months ended June 30, 2021	For the six months ended June 30, 2022	For the six months ended June 30, 2021
Mineralized Material Milled	t	398,830	366,301	793,212	515,881
Grade	g/t Au	1.02	1.30	1.09	1.20
Recovery	%	93.48%	93.65%	92.45%	93.38%
Gold Produced	Oz Au	12,610	14,890	25,988	18,387

Mining and Processing

Mining during Q2 2022 focused on the Edwards, Golden Crown, and Grant's Hill areas of the Beatons Creek Project. A total of 421,981 tonnes of mineralized material was mined, which represents a decrease from the 476,957 tonnes of mineralized material mined during Q2 2021 but an increase to the 395,824 tonnes of mineralized material mined during Q1 2022. A total of 17,710 m of grade control drilling was also completed, targeting the Edwards, Central and South Hill areas of the Beatons Creek Project which are planned to be mined during the operational wind-down, as well as a further 11,024 m targeting Grant's Hill Fresh mineralization.

During Q2 2022, 398,830 tonnes of mineralized material, equivalent to a throughput rate of approximately 4,431 tonnes per day, were processed. This equates to a significant increase over Q2 2021 during which 366,301 tonnes of mineralized material were processed and is in line with the 394,382 tonnes of mineralized material processed during Q1 2022. During Q2 2022, a change in the SAG mill liner supplier delivering improved supply certainty and higher quality componentry has seen an improvement in availability of the Golden Eagle Plant that will flow through into future months.

Mill feed grade averaged 1.02 g/t Au during Q2 2022 compared to 1.30 g/t Au during Q2 2021 and 1.15 g/t Au during Q1 2022. Feed grade is lower due to a large component of the feed coming from the

channelized Central Oxide area which inherently carries a lower grade, and the completion of mining of the Grant's Hill area (traditionally higher-grade feed) in Q1 2022.

Gold recovery for Q2 2022 averaged 93.48% compared to 93.65% for Q2 2021 and 91.41% for Q1 2022. Year-to-date recovery through June 30, 2022 is 92.45%, representing a slight decrease to 93% achieved in the same period in Fiscal 2021.

Gold and Silver Production

During Q2 2022, the Beatons Creek Project produced 12,610 ounces of gold and 1,502 ounces of silver as compared to 14,890 ounces of gold and 2,112 ounces of silver during Q2 2021 and 13,378 ounces of gold and 1,780 ounces of silver during Q1 2022.

FINANCIAL RESULTS

Three Months Ended June 30, 2022 Compared to Three Months Ended June 30, 2021

Net loss after tax for the three months ended June 30, 2022 was \$18,815,000 (June 30, 2021 - \$16,520,000), caused by a gross loss from operations and additional exploration and general administration expenditures. The Company began processing in early February 2021³ and the Company was still ramping up operations through to September 30, 2021 and did not declare that the Beatons Creek Project had achieved commercial production until October 1, 2021.

Gold and Sales Revenue

For the three months ended June 30, 2022, the Company generated revenue of \$29,685,000 (June 30, 2021 - \$31,704,000) which represented a revenue decrease of \$2,019,000 as compared to Q2 2021.

The decrease was primarily due to the decrease in gold ounces produced and sold in the current quarter.

For the three months ended June 30, 2022, the Company sold 12,378 ounces of gold (June 30, 2021 – 13,958 ounces) at an average realized price¹ of \$2,400 (AUD \$2,635 / USD \$1,880) per ounce generating \$29,642,000 in revenue from contracts with customers. For the three months ended June 30, 2021, the Company sold 13,958 ounces of gold at an average realized price¹ of \$2,270 (AUD \$2,118 / USD \$1,849) per ounce generating \$31,634,000 in revenue from contracts with customers.

The average gold price over the three months ended June 30, 2022 according to the World Gold Council was \$2,344 per ounce (AUD \$2,642 / USD \$1,817) (June 30, 2021 – \$2,229 (AUD \$2,358 / USD \$1,817)).

During the three months ended June 30, 2022, the Company sold 1,502 ounces of silver (June 30, 2021 – 2,112 ounces) generating \$43,000 in additional revenue (June 30, 2021 - \$70,000).

Cost of Sales

Total cost of sales for the three months ended June 30, 2022 was \$42,524,000 compared to \$31,704,000 for the three months ended June 30, 2021.

Cost of sales for the three months ended June 30, 2022 included production costs, depreciation, depletion, royalties, and changes in inventories, reflecting the difference between produced and sold ounces. Depletion from the Beatons Creek Project is currently recognized on the remaining ounces in the Oxide production profile⁷ and does not include any expense related to recoverable ounces from the Fresh production profile considering the Company is still awaiting approvals to mine the Fresh component of the Beatons Creek Resource⁷.

Cost of sales for the three months ended June 30, 2021 included expenditures incurred during the development phase of the Beatons Creek Project relating to both commissioning the mine and the production of inventory. In determining the costs to be allocated to inventory sold during the period, consideration was given to the estimated mining and processing costs per tonne expected to be achieved when the Beatons Creek Project was operating in a manner as intended by management. In practice, this means that little to no gross profit from mine operations was recognized while the Beatons Creek Project was not yet in commercial production. Cost of sales included production costs, royalties and selling costs, and changes in inventories, reflecting the difference between produced and sold ounces. Depreciation and depletion of the Beatons Creek Project was not charged as the Beatons Creek Project had not yet achieved commercial production. The Company declared that the Beatons Creek Project had achieved commercial production on October 1, 2021¹⁴.

Royalties for the three months ended June 30, 2022 were \$2,224,000, representing a 3% decrease over royalties for the three months ended June 30, 2021 of \$2,298,000. The decrease in royalty expense resulted from a decrease in revenues from the Beatons Creek Project.

All production costs were incurred in Australian dollars. The average foreign exchange rate was AUD \$0.9114 to CAD \$1.00 during the three months ended June 30, 2022 (June 30, 2021 – AUD \$0.9548 to CAD \$1.00).

Other Expenses

General administration costs for the three months ended June 30, 2022 were \$3,553,000 as compared to \$7,409,000 for the three months ended June 30, 2021. The decrease was primarily due to a decrease in share based payments and general non-operational cash costs. Share based payments were higher in the three-month period ended June 30, 2021 due to the acceleration of the expense associated with certain incentive stock options granted to employees and non-employees with production milestone-based vesting conditions. A number of the Company's outstanding incentive stock options vested fully once the Company produced 10,000 ounces of gold from any project which occurred during Q2 2021 and resulted in an accelerated expense recognition profile.

Exploration expenditures for the three months ended June 30, 2022 totalled \$11,351,000 (June 30, 2021 - \$2,097,000) and were recognized in line with the recent change in accounting policy to expense exploration expenditures (refer to Note 2 of the Q2 Financial Statements). The Company is advancing the Beatons Creek project Fresh feasibility study and included in the above amount is \$4,600,000 incurred through Q2 with an expected completion date in Q4 2022.

Other Income / expenses

Other income recognized during the three months ended June 30, 2022 totalled non-cash income of \$18,283,000 and relates primarily to a gain on a derivative asset held at fair value through profit and loss of \$18,509,000 which was recognized in relation to the New Found Transaction and represents the difference between the present value of the contractually agreed sale price of \$8.45 and New Found's share price on June 30, 2022, adjusted for risk factors (refer to Notes 5 and 6 of the Q2 Financial Statements), and the gain on expiration of the Sumitomo written call option of \$1,080,000. Refer to Note 15 of the Q2 Financial Statements. This gain was partially offset by a non-cash \$1,014,000 foreign exchange loss and a non-cash \$292,000 loss from the decrease in the value of the warrants held in GBM Resources Ltd. ("GBM"). Other income for the June 30, 2021 period totalled non-cash income of \$2,915,000 relating to the share of the profit from the Company's investment in New Found of \$2,545,000, a gain on foreign exchange of \$338,000, and other income of \$240,000, offset by a decrease in the value of the warrants held in GBM and Kalamazoo Resources Limited of \$208,000.

Finance Items

The Company incurred interest and finance costs of \$7,340,000 during the three months ended June 30, 2022 (June 30, 2021 - \$9,750,000), including \$183,000 of non-cash expense (June 30, 2021 – non-cash expense \$46,000) relating to rehabilitation provision accretion expense and the change in fair value of the derivative liability embedded within the Credit Facility.

Interest and finance costs also included \$7,402,000 (June 30, 2021 - \$1,796,000) of cash interest, non-cash accreted interest and an adjustment of \$5,630,000 relating to the Credit Facility during the three months ended June 30, 2022. On June 14, 2022, the Company announced the phased wind-down of operations at the Beatons Creek Project which constituted an event of default under the Credit Facility, as amended. A waiver to this event of default was granted by Sprout Lending on June 14, 2022, with repayment of the outstanding amount of the Credit Facility deferred until the Tranche 2 New Found shares are sold in August 2022 (refer to note 6 of the Q2 Financial Statements)⁹.

The Credit Facility is therefore remeasured as at June 30, 2022 and has been recorded at the total amount repayable of USD \$40,000,000 (\$51,544,000).

The Company recognized a total gain of \$684,000 (June 30, 2021 – loss of \$2,000) on the change in fair value of the Sumitomo Corporation (“**Sumitomo**”) liability and subsequent settlement. On April 21, 2022, Sumitomo made a final contribution of \$335,000 and subsequently exercised its reimbursement option under the Egina fam-in agreement (“**EFA**”). In response, Novo exercised its right to settle the liability via the issuance of common shares and issued 3,382,550 common shares to Sumitomo with a fair value of \$0.94 per share for gross consideration of \$3,180,000. All of the common shares issued to Sumitomo are subject to orderly sale restrictions and a 12-month contractual hold period expiring on April 21, 2023. As a result of Sumitomo’s exercise of its reimbursement option and Novo’s exercise of its right to settle via the issuance of common shares, the EFA was completed and Sumitomo’s rights thereunder were extinguished. The Company recognized a gain of \$2,935,000 through profit and loss of the difference between the fair value of the Share Payment Option and the remaining financial liability. Refer to Note 15 of the Q2 Financial Statements.

Interest and finance costs further included non-cash interest expenses of \$438,000 (June 30, 2021 - \$1,520,000) related to leases recognized pursuant to IFRS 16 *Leases* (“**IFRS 16**”). The Company recognizes lease liabilities and corresponding right-of-use assets pursuant to IFRS 16 where the Company has the right to use assets underlying certain arrangements, including the Company’s open pit mining contract, PhotonAssay arrangement with Intertek⁸, and various office space and other property leases in Western Australia to support exploration and operations. Refer to Notes 9 and 12 of the Q2 Financial Statements.

The Company incurred one-time finance costs of \$6,386,000 during the three months ended June 30, 2021 related to the brokered financing of special warrants for gross proceeds of \$26.4 million²¹ (the “**Offering**”). The special warrants issued pursuant to the Offering were initially recognized as financial liabilities at fair value through profit and loss pursuant to IAS 32 *Financial Instruments*, and associated transaction costs were also expensed through profit and loss pursuant to IFRS 9 *Financial Instruments*. \$1,759,000 represents cash transaction costs incurred for the three months ended June 30, 2021, including the Offering lead agent’s 6% financing fee, and the remaining \$4,627,000 represents the non-cash movement in fair value of the special warrants between the date of issuance on May 4, 2021 and the date of conversion into units of the Company on May 31, 2021.

Other Comprehensive Loss

During the three months ended June 30, 2022, non-cash loss of \$10,196,000 (June 30, 2021 – income of \$704,000) represents movement in the fair value of the Company’s marketable securities. The Company’s portfolio consists of holdings in a number of listed and unlisted entities, including GBM, Kalamazoo Resources Limited, New Found, Elementum 3D, Inc., and 1342980 BC Ltd. Refer to Note 6 of the Q2 Financial Statements.

During the three months ended June 30, 2022, the Company also recognized non-cash losses of \$9,451,000 (June 30, 2021 – loss \$6,824,000) pertaining to the foreign exchange impact of the translation of subsidiary financial information. The Company’s Australian subsidiaries, which incur most of the Company’s operational expenditure, have an Australian dollar functional currency. Gains or losses are recognized upon translation of income and expenses denominated by the Company’s Australian subsidiaries in Australian dollars into the Company’s Canadian dollar presentation currency. Refer to *Cost of Sales* above for foreign exchange rate movement across the relevant periods.

²¹ Refer to the Company’s news release dated [May 4, 2021](#).

Six Months Ended June 30, 2022 Compared to Six Months Ended June 30, 2021

Net loss after tax for the six months ended June 30, 2022 was \$31,747,000 (June 30, 2021 - \$15,406,000) caused by a gross loss from operations and additional exploration and general administration expenditures.

Gold and Sales Revenue

For the six months ended June 30, 2022, the Company generated revenue of \$61,560,000 (June 30, 2021 - \$39,422,000) which represented an increase in revenue of \$22,138,000 as a result of increased gold production and sales at a higher gold price.

For the six months ended June 30, 2022, the Company sold 25,742 ounces of gold at an average realized price of \$ 2,394 (AUD \$2,618 / USD \$1,883) per ounce generating \$61,463,000 in revenue from contracts with customers. For the six months ended June 30, 2021, the Company sold 17,456 ounces of gold at an average realized price of \$2,259 (AUD \$1,919 / USD \$1,811) per ounce generating \$39,333,000 in revenue from contracts with customers. The average gold price over the six months ended June 30, 2022 according to the World Gold Council was \$2,382 (AUD \$2,605 / USD \$1,873) per ounce (June 30, 2021 – \$2,250 (AUD \$2,340 / USD \$1,805)).

During the six months ended June 30, 2022, the Company sold 3,282 ounces of silver (June 30, 2021 – 2,673 ounces) generating \$97,000 in additional revenue (June 30, 2021 - \$89,000).

Cost of Sales

Total cost of sales for the six months ended June 30, 2022 was \$79,899,000 compared to \$39,422,000 for the six months ended June 30, 2021. Refer to Financial Results - Three months ended June 30, 2022 compared to three months ended June 30, 2021 – Cost of Sales regarding recognition and classification of cost of sales prior to the declaration of commercial production.

Royalties for the six months ended June 30, 2022 were \$4,459,000, representing a 74% increase over royalties for the six months ended June 30, 2021 of \$2,566,000. The increase in royalty expense resulted from an increase in revenues from the Beatons Creek Project.

All production costs were incurred in Australian dollars. The average foreign exchange rate was AUD \$0.9145 to CAD \$1.00 during the six months ended June 30, 2022 (June 30, 2021 – AUD \$0.9619 to CAD \$1.00).

Other Expenses

General administration costs for the six months ended June 30, 2022 were \$7,554,000 as compared to \$15,052,000 for the six months ended June 30, 2021. The decrease was primarily due to a decrease in non-cash share-based payment expenses and general non-operational cash costs. Share-based payments were higher in the six-month period ended June 30, 2021 due to the acceleration of the expense associated with certain incentive stock options granted to employees and non-employees with production milestone-based vesting conditions. A number of the Company's outstanding incentive stock options vested fully once the Company produced 10,000 ounces of gold from any project which occurred during Q2 2021 and resulted in an accelerate expenses recognition profile. An additional batch of incentive stock options vested fully during the three months ended March 31, 2022 as the Company achieved aggregate production of 60,000 ounces of gold.

Exploration expenditures for the six months ended June 30, 2022 totalled \$15,389,000 (June 30, 2021 - \$4,945,000) and were recognized in line with the recent change in accounting policy to expense exploration expenditures. The Company is advancing the Beatons Creek project Fresh feasibility study and included in the above amount is \$4,600,000 incurred through Q2 with an expected completion date in Q4 2022.

Other Income

Other income recognized during the six months ended June 30, 2022 totalled \$18,953,000 and relates primarily to a non-cash \$433,000 foreign exchange loss and a non-cash \$221,000 loss from the decrease in the value of the warrants held in GBM. Refer to *Financial Results - Three months ended June 30, 2022 compared to three months ended June 30, 2021 – Other Income* regarding recognition of the treatment of the gain on the derivative asset related to the New Found Transaction and the Sumitomo written call option. Other income for the June 30, 2021 period totalled non-cash income of \$1,006,000 relating to the share of the profit from the Company's investment in New Found of \$1,579,000, a gain on foreign exchange of \$561,000, and other income of \$240,000, offset by a decrease in the value of the warrants held in GBM and Kalamazoo Resources Limited of \$1,374,000.

Finance Items

The Company incurred interest and finance costs of \$7,413,000 during the six months ended June 30, 2022 (June 30, 2021 - \$11,184,000), including \$363,000 of non-cash expense (June 30, 2021 – \$182,000) relating to rehabilitation provision accretion expense and a gain of \$361,000 (June 30, 2021 - \$288,000) relating to the change in fair value of the derivative liability embedded within the Credit Facility.

Interest and finance costs also included \$9,345,000 (June 30, 2021 - \$3,442,000) of cash interest and accreted interest related to the Credit Facility during the six months ended June 30, 2022. Refer to *Financial Results - Three months ended June 30, 2022 Compared to Three Months Ended June 30, 2021 – Finance Items* for recognition of the Credit Facility.

The Company further recognized a total gain of \$2,942,000 (June 30, 2021 – \$90,000) on the change in fair value of the Sumitomo liability and subsequent settlement. Refer to *Financial Results - Three Months Ended June 30, 2022 Compared to Three Months Ended June 30, 2021 – Finance Items* for regarding treatment of the financial liability and written call option on settlement.

Refer to *Financial Results - Three Months Ended June 30, 2022 Compared to Three Months Ended June 30, 2021 – Finance Items* regarding the breakdown and treatment of the special warrants issued during the three months ended June 30, 2021.

Other Comprehensive Loss

During the six months ended June 30, 2022, non-cash losses of \$28,894,000 (June 30, 2021 – \$1,981,000) represent movement in the fair value of the Company's marketable securities. Refer to Note 6 of the Q2 Financial Statements.

During the six months ended June 30, 2022, the Company also recognized non-cash losses of \$6,022,000 (June 30, 2021 – \$12,082,000) pertaining to the foreign exchange impact of the translation of subsidiary financial information. The Company's Australian subsidiaries, which incur most of the Company's operational expenditure, have an Australian dollar functional currency. Gains or losses are

recognized upon translation of income and expenses denominated by the Company's Australian subsidiaries in Australian dollars into the Company's Canadian dollar presentation currency. Refer to *Cost of Sales* above for foreign exchange rate movement across the relevant periods.

Available liquidity¹ totalled \$144,225,000 as at June 30, 2022 (December 31, 2021 - \$102,868,000) and represented the value of the Company's realizable assets. The Company's available liquidity¹ has increased since December 31, 2021 due to the cash inflow following the completion of Tranche 1 of the sale of the New Found shares.

The Company's working capital and Credit Facility adjusted working capital position increased significantly since December 31, 2021 as a result of the current classification of the New Found investment and the Credit Facility. *Refer to Significant Business Developments & Outlook.*

	For the three months ended June 30, 2022 \$'000	June 30, 2021 \$'000	For the six months ended June 30, 2022 \$'000	June 30, 2021 \$'000
Cash flow information

Change in cash	53,197	25,585	42,449	5,907
Free cash flow ¹	(13,138)	(3,711)	(21,100)	(28,055)

The Company used \$11,999,000 (June 30, 2021 - \$2,498,000) from operating cash flows during the three months ended June 30, 2022. The increase in cash outflows relates primarily to a greater net loss generated during the period.

The Company used \$18,014,000 (June 30, 2021 - \$17,864,000) from operating cash flows during the six months ended June 30, 2022. The slight increase in cash outflows relates primarily to the treatment of cost of sales prior to the declaration of commercial production and certain non-cash adjustments such as share based payments, depreciation, and finance costs.

During Q2, 2022, the Company generated \$67,749,000 from investing activities (Q2 2021 – used \$876,000) which included capital expenditures of \$448,000 (June 30, 2021 - \$768,000) and \$691,000 (Q2 2021 - \$445,000) relating to the further development of the Beatons Creek Project. Investing cashflows in Q2 2022 also included cash proceeds of \$68,888,000 (Q2 2021 - \$577,000) received from the sale of Tranche 1 of the New Found Transaction (refer to Note 6 of the Q2 Financial Statements). The Company invested \$240,000 in exploration and evaluation assets in Q1 2021.

During the six months ended June 30, 2022 the Company generated \$65,802,000 from investing activities (June 30, 2021 – outflows of \$35,000). This included capital expenditures for the period of \$2,322,000 (June 30, 2021 - \$2,665,000) and \$764,000 (June 30, 2021 - \$7,526,000) for development of the Beatons Creek Project. These cash outflows were offset by cash proceeds of \$68,888,000 received from the sale of New Found. During the six months ended June 30, 2021 cash outflows were offset by cash proceeds of \$9,432,000 received from the sale of a part of the Company's Blue Spec Project to Calidus Resources Limited and \$946,000 received from the sale of marketable securities.

During the three months and six months ended June 30, 2022 and 2021, the Company experienced \$2,895,000 (\$2,698,000) and \$5,681,000 (\$4,905,000) in financing cash outflows, respectively, relating to the principal portion of lease liabilities incurred pursuant to IFRS 16. The remaining investing inflows for the three-months ended June 30, 2021 totalled \$31,657,000 and were primarily due to funds received from the Offering and the Credit Facility amendment in April 2021²². The investing inflows for the six-months ended June 30, 2021 were partially offset by a one-time payment of the Comet Well deferred consideration totaling \$2,946,000 (AUD \$3,000,000)²³.

Free cash flow¹ for Q2 2022 comprised outflows of \$13,138,000 (June 30, 2021 – outflows of \$3,711,000). Free cash flows for the six months ended June 30, 2022 comprised of outflows of \$21,100,000 (June 30, 2021 – outflows of \$28,055,000). In addition to operating at a loss, the Company reallocated its operating cash flow generated during Q2 2022 and 2021 to capital projects and exploration activities, thus minimizing free cash flow¹.

SELECTED FINANCIAL INFORMATION

Management is responsible for the Q2 Financial Statements referred to in this MD&A and provides officers' disclosure certifications filed with the securities regulators of the Canadian jurisdictions in which Novo is a reporting issuer. Although the Company's audit committee reviews the Q2 Financial Statements and MD&A and makes recommendations to the Board, the Board has final approval of the Q2 Financial Statements and MD&A.

SUMMARY OF QUARTERLY RESULTS

The following information is derived from and should be read in conjunction with the Q2 Financial Statements and the condensed interim consolidated financial statements for each of the past eight quarters which have been prepared in accordance with IFRS applicable to interim financial reporting including IAS 34.

		2 nd Quarter 2022 June 30, 2022	1 st Quarter 2022 March 31, 2022	4 th Quarter 2021 December 31, 2021	3 rd Quarter 2021 September 30, 2021	2 nd Quarter 2021 June 30, 2021	1 st Quarter 2021 March 31, 2021	4 th Quarter 2020 December 31, 2020	3 rd Quarter 2020 October 31, 2020

²³ Refer to the Company's news release dated [February 4, 2021](#).

CASH RESOURCES AND GOING CONCERN

The Q2 Financial Statements have been prepared on a going concern basis, which contemplates continuity of business activities, including ongoing exploration activities and the winding down of operations at the Beatons Creek Project through the latter half of 2022, and the realization of assets and settlement of liabilities in the normal course of business.

For the six-month period ended June 30, 2022, the Company reported operating cash outflows of \$18,014,000 (June 30, 2021: \$17,864,000) and investing cash inflows of \$65,802,000 (June 20, 2021: outflows \$35,000). The Company had cash on hand and short-term investments of \$74,884,000 at June 30, 2022 and \$74,647,000 at August 15, 2022.

On April 12, 2022, the Company committed to the New Found Transaction, Tranche 1 of which completed on April 27, 2022, and Tranche 2 of which completed on August 5, 2022 and in aggregate raised gross proceeds of \$125.9 million.

Pursuant to the Credit Facility, Sprott Lending consented to the New Found Transaction and advised Novo that it would not require repayment of the Credit Facility in full until settlement of Tranche 2. The Credit Facility was repaid in full on August 12, 2022, leaving Novo free of long-term debt.

On June 14, 2022, the Company announced the phased wind-down of operations at the Beatons Creek Project. As a result, the Company has prepared a cash flow forecast demonstrating that the Company will have access to sufficient cash flows to meet all commitments and working capital requirements for the 12-month period from the date of signing of the Q2 Financial Statements.

The directors have identified a range of options to ensure sufficient funding is available, including the timing of expenditures, which is at the discretion of the directors, realising additional liquidity from the potential to dispose of certain of the Company's assets at favourable prices in acceptable timeframes, or a combination thereof. In addition, the directors may choose to secure additional funding by raising capital from equity markets or other sources should market conditions present favourable terms.

The directors are satisfied that the Company has sufficient funding resources in order to meet its committed expenditures for at least the next 12 months and accordingly, the Q2 Financial Statements have been prepared on a going concern basis.

CONTRACTUAL OBLIGATIONS

As at June 30 2022, the following contractual obligations were outstanding:

As at June 30, 2022	Within 1 year \$'000	Within 1-2 years \$'000	Within 2-3 years \$'000	Within 3+ years \$'000	Total \$'000
Trade and other payables	18,454	-	-	-	18,454
Provisions	6,312	-	-	-	6,312
Leases	10,175	4,702	237	6	15,120
Credit facility	51,544	-	-	-	51,544

OFF-BALANCE SHEET TRANSACTIONS

There are currently no off-balance sheet arrangements which have, or are reasonably likely to have, a current or future effect on the financial performance or the financial condition of the Company.

CONTINGENCIES

From time to time, the Company is involved in various claims, litigation and other matters in the ordinary course and conduct of business. Some of these pending matters may take a number of years to resolve.

While it is not possible to determine the ultimate outcome of such actions at this time, and inherent uncertainties exist in predicting such outcomes, it is the Company's belief that the ultimate resolution of any such current actions is not reasonably likely to have a material adverse effect on its consolidated financial position or results of operations.

RELATED PARTY TRANSACTIONS

During Q2 2022 and the three months ended June 30 2022, the following amounts were incurred with related parties in the normal course of operations and were measured at the exchange value which represented the amount of consideration established and agreed to by the related parties:

Name	Nature of Compensation	For the three months ended		For the six months ended	
		June 30, 2022 \$'000	June 30, 2021 \$'000	June 30, 2022 \$'000	June 30, 2021 \$'000
Non Executive Co-Chairman & Director	Salary / Director fees	32	92	59	187
Executive Co-Chairman & Director	Salary	104	-	229	-
Former CEO & Director	Salary	99	106	212	216
CFO & Corporate Secretary	Salary	57	86	155	175
VP, Corporate Communications	Consulting	45	45	90	90
Independent Directors	Director Fees	56	90	120	184
Total		392	419	864	852

Details of these compensation arrangements are outlined in the Company's most recently filed Form 51-102F5 Information Circular (filed under the Company's profile on SEDAR at www.sedar.com on June 1, 2022).

From time to time, Novo's board of directors (the "**Board**") incentivizes the Company's management, employees, and consultants by issuing incentive stock options. Amounts outlined in the table above represent such portion of the Company's share-based payment expenses which relate to incentive stock options granted to the Company's management and Board, namely the non-executive co-chairman/director, the executive co-chairman/director, an independent director, the chief financial officer/corporate secretary, and the vice president, corporate communications. The Company's methodology for calculating the fair value of share-based payments is outlined in note 2 of the Q2 Financial Statements. Share-based payments relating to these key management personnel and directors totaled \$1,748,000 during Q2 2022 (June 30, 2021 - \$6,987,000).

CRITICAL ACCOUNTING ESTIMATES

The accounting policies and methods of application applied by the Company are outlined in the Q2 Financial Statements (refer to Note 2).

Accounting policies adopted during the period for new transactions and events

Change in accounting policy – exploration and evaluation assets

As fully disclosed in the Company's consolidated audited financial statements for the years ended December 31, 2021 and 2020, the Company adopted a voluntary change to its accounting policy for exploration and evaluation expenditures in the last quarter of the year ended December 31, 2021 and

has applied the change retrospectively. As a result, balances of comparative periods have been restated.

Under the new policy, the Company recognizes these expenditures as exploration and evaluation costs in the condensed interim consolidated statements of profit or loss and other comprehensive income in the period incurred until management concludes the technical feasibility and commercial viability of a mineral deposit has been established. Costs that represent the acquisition of rights to explore a mineral deposit continue to be capitalized. Prior to December 31, 2021, the Company's policy was to capitalize all exploration and evaluation expenditures as exploration and evaluation assets.

Impact of the change in accounting policy

The Company reclassified all post-acquisition exploration and evaluation expenditures that were (i) capitalized as exploration and evaluation assets, and (ii) included in mine development assets in the statement of financial position, to exploration and evaluation expenditures in the statements of profit and loss and other comprehensive income or loss. Initial acquisition costs of the Beatons Creek Project were unaffected by the change in accounting policy. Other than acquisition costs, all capitalized amounts for exploration and evaluation assets associated with the Company's other projects were retrospectively expensed.

All Australian research and development tax incentive credits associated with exploration costs that were offset against exploration and evaluation assets have been reclassified to profit and loss in accordance with the Company's stated accounting policy.

The adjustment arising from the reclassification of post-acquisition exploration and evaluation expenditures has been translated into the presentation currency of the Company in accordance with the Company's stated accounting policy for foreign currencies using the relevant average exchange rates. As a result of the change in accounting policy, cash outflows relating to post acquisitions exploration and evaluation expenditures have been reclassified from investing to operating activities in the condensed interim consolidated statement of cash flows.

As a result of the accounting policy change, the Company recorded the following adjustments to specific account balances, increasing (decreasing) amounts previously recognized in the condensed interim consolidated financial statements. The impact of the change in accounting policy on the consolidated statement of financial position at December 31, 2021 was disclosed in the Company's annual consolidated financial statements for the year then ended.

FINANCIAL INSTRUMENTS

a) Fair value

The Company's financial instruments include cash, short-term investments, other receivables, marketable securities, financial assets, accounts payable, provisions, lease liabilities and accrued liabilities, the Sumitomo funding liability, the Credit Facility and the derivative liability. The fair value hierarchy reflects the significance of inputs in making fair value measurements as follows:

- Level 1 - applies to assets or liabilities for which there are quoted prices in active markets for identical assets or liabilities.
- Level 2 - applies to assets or liabilities for which there are inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly such as quoted prices for similar assets or liabilities in active markets or indirectly such as quoted prices for identical assets or liabilities in markets with insufficient volume or infrequent transactions.
- Level 3 - applies to assets or liabilities for which there is unobservable market data.

The recorded amounts of cash, short-term investments, other receivables and accounts payable and accrued liabilities approximate their respective fair values due to their short-term nature. The Sumitomo funding liability and its related embedded derivatives are measured in their entirety as at fair value through profit or loss ("FVTPL"), except to the extent that the change in fair value is attributable to changes in credit risk of the Sumitomo funding liability in which case it is presented in OCI.

The Credit Facility was initially recognized at fair value and is subsequently measured at amortized cost using the effective interest method, but was recognized at the total amount repayable as at June 30, 2022 due to being payable subsequent to the event of default (refer to note13). The derivative liability was initially recognized at fair value and is subsequently measured in its entirety at FVTPL.

Financial Instruments carried at fair value:

- The marketable securities for listed shares are measured using Level 1 inputs. The fair value of marketable securities are measured at the closing market price obtained from the TSX Venture Exchange and the Australian Securities Exchange, as applicable.
- The forward contract is measured using Level 3 inputs, the fair value of the forward contract represents the difference between the present value of the contractually agreed sale price of \$8.45 and New Found's share price on June 30, 2022 adjusted for risk factors.
- The marketable securities balance for the GBM warrants is measured using Level 2 inputs. The fair values of the GBM warrants have been determined using a Black-Scholes option pricing model.
- The marketable securities balance held in E3D is measured using Level 3 inputs. The value of the shares held in E3D was determined using the fair value of USD \$6.27 which represents the price at which E3D raised funds. Refer to note 6 of the Q2 Financial Statements.
- The Sumitomo funding liability balance is measured using Level 3 inputs. The fair value of the liability at December 31, 2021 represented the contractual value that the Company would repay if Sumitomo were to exercise their Reimbursement Option.
- The embedded derivative associated with the Credit Facility was measured using Level 3 inputs. The fair value of the derivative was determined by using a Black 76 model including accretion due to the passage of time, agreed repayment schedules, required interest payments, changes in the applicable interest rate (US three-month LIBOR or 1%), and changes in the Company's credit spread.

	Fair Value Hierarchy			Total \$'000

Closing balance	17	6,158

Financial instruments carried at amortized cost:

At December 31, 2021, the Credit Facility was measured using Level 3 inputs. The carrying value of the Credit Facility was recognized using the effective interest rate method and was adjusted by the value of the derivative liability. At June 30, 2022 the Credit facility has been recorded at the amount repayable. The carrying value represents the fair value.

The fair value of the Credit Facility is shown in the table below:

	Carrying Value		Fair Value	
	June 30, 2022 \$'000	December 31, 2021 \$'000	June 30, 2022 \$'000	December 31, 2021 \$'000
Credit facility	51,544	43,723	51,544	44,212

There were no transfers between levels or changes in the valuation techniques and processes or inputs for determining fair value for financial instruments during the year.

INTERNAL CONTROLS OVER FINANCIAL REPORTING

Management formally assessed the effectiveness of the Company's internal control over financial reporting as at June 30, 2022, and continues to do so on an on-going basis. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in Internal Control – Integrated Framework (also known as “**COSO 2013**”).

Management is responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. Any system of internal control over financial reporting, no matter how well designed, has inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable, not absolute, assurance with respect to financial statement preparation and presentation.

There have been no significant changes in the Company's internal controls during the period ended June 30, 2022 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

OUTSTANDING SHARE DATA

The Company is authorized to issue an unlimited number of common shares without par value (“**Common Shares**”). All issued Common Shares are fully paid and non-assessable. As of August 15, 2022 the following Common Shares, Common Share purchase warrants (the “**Warrants**”), and stock options were issued and outstanding:

	Number of shares	Exercise Price (C\$)	Expiry date
Common Shares	249,322,054	-	-
Stock Options	1,500,000	0.95	April 14, 2023
Stock Options	150,000	1.57	April 14, 2023
Stock Options	1,300,000	7.70	October 20, 2022
Stock Options	300,000	7.70	April 14, 2023

Warrants	5,176,500	3.00	May 4, 2024
Fully Diluted	286,103,272		

NON-IFRS MEASURES

Certain non-IFRS measures have been included in this MD&A. The Company believes that these measures, in addition to measures prepared in accordance with IFRS, provide readers with an improved ability to evaluate its underlying performance and to compare it to information reported by other companies. The non-IFRS measures are intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

These measures do not have any standardized meaning prescribed under IFRS, and therefore may not be comparable to similar measures presented by other issuers. Refer to *Significant Business Developments & Outlook* for the treatment of depreciation and depletion costs prior and subsequent to the declaration of commercial production.

Non-IFRS measures for Q2 2021 are not necessarily indicative of ongoing performance considering the Company had only recently commenced operations and had not yet declared commercial production.

Average realized price

The Company uses the average realized price per ounce of gold sold to better understand the gold price and, once applicable, cash margin realized throughout a period.

Average realized price is calculated as revenue from contracts with customers plus treatment and refinery charges included in dore revenue less silver revenue divided by gold ounces sold.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

In thousands of CAD, except where noted		For the three months ended		For the six months ended	
		June 30, 2022	June 30, 2021	June 30, 2022	June 30, 2021
Revenue from contracts with customers	\$	29,685	31,704	61,560	39,422
Treatment and refining charges	\$	70	51	175	98
Less: Silver revenue (Note 17)	\$	(43)	(70)	(97)	(89)
Gold revenue	\$	29,712	31,685	61,638	39,431
Gold sold	oz	12,378	13,958	25,742	17,456
Average realized price	\$/oz	2,400	2,270	2,394	2,259

Average realized price	AUD\$/oz	2,635	2,401	2,618	2,348
Foreign exchange rate	CAD:USD	0.7834	0.8144	0.7865	0.8019
Average realized price	USD\$/oz	1,880	1,849	1,883	1,811

Total cash costs

The Company reports total cash costs on a per gold ounce sold basis. In addition to measures prepared in accordance with IFRS, such as revenue, the Company believes this information can be used to evaluate its performance and ability to generate operating earnings and cash flow from its mining operations. The Company uses this metric to monitor operating cost performance.

Total cash costs include cost of sales such as mining, processing, mine general and administrative costs, royalties, selling costs, and changes in inventories less non-cash depreciation and depletion, write-down of inventories and site share-based payments where applicable, and silver revenue divided by gold ounces sold to arrive at total cash costs per ounce of gold sold.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

In thousands of CAD, except where noted		For the three months ended		For the six months ended	
		June 30, 2022	June 30, 2021	June 30, 2022	June 30, 2021
Gold sold	Oz Au	12,378	13,958	25,742	17,456

Foreign exchange rate	CAD:AUD	1.0976	1.0575	1.0935	1.0396
Cash costs per oz of gold sold	AUD\$/oz	2,852	2,118	2,523	1,919
Foreign exchange rate	CAD:USD	0.7834	0.8144	0.7865	0.8019
Cash costs per oz of gold sold	USD\$/oz	2,035	1,631	1,815	1,481

*Depreciation and depletion are reconciled to aggregate depreciation in the operating adjustments in the condensed interim consolidated statements of cash flows in the Q2 Financial Statements.

All-in sustaining costs

The Company believes that AISC more fully defines the total costs associated with producing gold. AISC is calculated based on the definitions published by the World Gold Council ("WGC"). The WGC is not a regulatory organization. The Company calculates AISC as the sum of total cash costs (as described above), sustaining capital expenditures (excluding significant projects considered expansionary in nature), accretion on decommissioning and restoration provisions, treatment and refinery charges, payments on lease obligations, site share-based payments where applicable, and corporate administrative costs less any share-based payments directly attributable to exploration and non-operating payments on lease obligations, all divided by gold ounces sold during the period to arrive at a per ounce amount.

Other companies may calculate this measure differently as a result of differences in underlying principles and policies applied. Differences may also arise due to a different definition of sustaining versus expansion capital.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

In thousands of CAD, except where noted		For the three months ended		For the six months ended	
		June 30, 2022	June 30, 2021	June 30, 2022	June 30, 2021

Corporate administrative costs (Note 19)	\$	3,553	7,409	7,554	15,052
Less: exploration share-based payments**	\$	-	(1,724)	(213)	(3,792)
Total all-in sustaining costs	\$	39,582	36,342	75,420	48,364
AISC per oz of gold sold	\$/oz	3,198	2,604	2,930	2,771
Foreign exchange rate	CAD:AUD	1.0976	1.0575	1.0935	1.0396
AISC per oz of gold sold	AUD\$/oz	3,510	2,753	3,204	2,880
Foreign exchange rate	CAD:USD	0.7834	0.8144	0.7865	0.8019
AISC per oz of gold sold	USD\$/oz	2,505	2,120	2,304	2,222

*The non-operating payments on lease obligations adjustment includes lease amounts which are not directly related to the Company's operations at the Beatons Creek Project. This figure is not separately disclosed in the Q2 Financial Statements.

**Share-based payment expenses directly attributable to the Company's exploration staff are excluded from the calculation of AISC. This figure is not separately disclosed in the Q2 Financial Statements and is a subset of the share-based payments expense outlined in Note 19 of the Q2 Financial Statements.

EBITDA

The Company uses EBITDA to better understand its ability to generate liquidity by producing operating cash flow to fund working capital needs, service debt obligations, and fund capital expenditures.

EBITDA is defined as net earnings before interest and finance expense, interest and finance income, current income tax expense, deferred income tax expense, depreciation and depletion. EBITDA is also adjusted for non-recurring transactions such as the change in fair value of derivative instruments, foreign exchanges gains and losses, gains and losses on the disposal of assets, impairment, and other income.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

In thousands of CAD, except where noted		For the three months ended		For the six months ended	
		June 30, 2022	June 30, 2021	June 30, 2022	June 30, 2021
		\$'000	\$'000	\$'000	\$'000

Adjusted EBITDA		(21,817)	(6,014)	(25,274)	1,856

*Depreciation and depletion are reconciled to aggregate depreciation in the operating adjustments in the condensed interim consolidated statements of cash flows in the Q2 Financial Statements.

Free cash flow

The Company uses free cash flow as an indicator of the cash generated from its operations before consideration of how those activities are financed.

Free cash flow is calculated as cash generated from operating activities less cash used in investing activities. Free cash flow is also adjusted for non-operating transactions including the sale of marketable securities.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

In thousands of CAD, except where noted	For the three months ended		For the six months ended	
	June 30, 2022 \$'000	June 30, 2021 \$'000	June 30, 2022 \$'000	June 30, 2021 \$'000

Free cash flow	(13,138)	(3,711)	(21,100)	(28,055)

Adjusted earnings and adjusted basic and diluted earnings per share

The Company uses adjusted earnings and adjusted basic and diluted earnings per share to measure its underlying operating and financial performance.

Adjusted earnings are defined as net earnings adjusted to exclude specific items that are significant, but not reflective of the Company's underlying operations, including: foreign exchange (gain) loss, (gain) loss on financial instruments at fair value, impairment, and non-recurring gains and losses on treatment of marketable securities, sale of E&E assets, and associated tax impacts. Adjusted basic and diluted earnings per share are calculated using the weighted average number of shares outstanding under the basic and diluted method of earnings per share as determined under IFRS.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

In thousands of CAD, except where noted	For the three months ended		For the six months ended	
	June 30, 2022	June 30, 2021	June 30, 2022	June 30, 2021

Adjusted basic earnings per share	\$ (0.15)	(0.08)	(0.20)	(0.13)

Available liquidity

The Company believes that available liquidity provides an accurate measure of the Company's ability to liquidate assets in order to satisfy its liabilities. The Company uses this metric to help monitor its risk profile.

Available liquidity includes cash, short-term investments, and assets which are readily saleable within the next 12 months, including gold in circuit and stockpiles, receivables, marketable securities (to the extent that an established market exists for such marketable securities, they are free of any long-term trading restrictions, and sufficient historical volume exists to liquidate holdings within 12 months), and gold specimens. The market value of certain marketable securities has been used in the calculation of available liquidity which may not reconcile to the accounting treatment of such marketable securities. Refer to Notes 6 of the Q2 Financial Statements.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

	June 30, 2022	December 31, 2021	December 31, 2020	January 31, 2020
	\$'000	\$'000	\$'000	\$'000

* The December 31, 2021 figure represents the number of free-trading New Found common shares. The June 30, 2022 figure represents the Company's remaining New Found shares which were committed to be sold pursuant to Tranche 2 which completed on August 5, 2022.

Working capital

Working capital is defined as current assets less current liabilities and is used to monitor the Company's liquidity.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

	June 30, 2022	December 31, 2021
	\$'000	\$'000
Current assets	148,388	49,385
Current liabilities	85,823	45,460
Working capital	62,565	3,925

Credit Facility adjusted working capital

Credit Facility adjusted working capital is a derivation of working capital with a series of adjustments as permitted pursuant to the Credit Facility. The Company uses Credit Facility adjusted working capital to monitor its compliance against certain covenants within the Credit Facility.

The following table reconciles this non-IFRS measure to the most directly comparable IFRS measure disclosed in the Q2 Financial Statements.

<i>In thousands of CAD, except where noted</i>		June 30, 2022	December 31, 2021

CAUTION ON FORWARD-LOOKING INFORMATION

This MD&A contains “forward-looking information” within the meaning of Canadian securities laws. Forward-looking information in this MD&A includes, but is not limited to, the Company’s planned operations at its Beatons Creek Project and the expected recommencement of production; timing of receipt of Fresh approvals; the expectation that the appeal of the EPA’s determination that the Company’s approvals submission regarding the Fresh mineralization component of the Beatons Creek Project does not require assessment under Part IV of the Western Australian Environmental Protection Act 1986 will be resolved in due course; that the Company expects to make a final investment decision regarding mining of the Beatons Creek Fresh mineral resource post receipt of results of the Feasibility Study; that economic mining and processing of the Oxide mineral resource at the Beatons Creek Project can be extended for an additional quarter from the three-phase mine plan outlined in December 2021 and continue to the end of Q3 2022; the value of certain Company assets, in particular the fair value of marketable securities held by the Company; the Company’s planned production from, and further potential of, the Company’s mineral properties; the Company’s planned exploration activities; the Company’s ability to raise additional funds; the future price of minerals, particularly gold; the estimation of mineral resources; the realization of mineral resource estimates; capital expenditures; success of exploration activities; exploration and development issues; currency exchange rates; government regulation of exploration, development, and mining operations; and social and environmental risks. Estimates regarding the anticipated timing, amount and cost of exploration and development activities are based on numerous factors including but not limited to assumptions underlying mineral resource estimates and the realization of such estimates. Capital and development cost estimates are based on extensive research of the Company, purchase orders placed by the Company to date, recent estimates of development and operating costs and other factors. Forward-looking information is characterized by words such as “plan”, “expect”, “budget”, “target”, “schedule”, “estimate”, “forecast”, “project”, “intend”, “believe”, “anticipate” and other similar words or statements that certain events or conditions “may”, “could”, “would”, “might”, or “will” occur or be achieved. Forward-looking information is based on the opinions, assumptions and estimates of management considered reasonable at the date the statements are made, and are inherently subject to a variety of risks and uncertainties and other known and unknown factors that could cause the actual results, performance or achievements of the Company to be materially different from any future results, performance or achievements expressed or implied by the forward-looking information.

Such factors include: the timing of receipt of Fresh approvals; the fluctuating price of gold; reliance on third parties to provide technical services and information, particularly with respect to assay turnaround timeframes; success of exploration, development and operations activities; the ability to comply with and maintain the Credit Facility in good standing; health, safety and environmental risks; variations in the estimation of mineral resources; uncertainty relating to mineral resources; the potential of cost overruns; risks relating to government regulation; the impact of Australian laws regarding foreign investment; access to additional capital; volatility in the market price of the Company's securities; liquidity risk; risks relating to native title and Aboriginal heritage; risks relating to the construction and development of new operations; the availability of adequate infrastructure; the availability of adequate energy sources; seasonality and unanticipated weather conditions; limitations on insurance coverage; the prevalence of competition within the industry; currency exchange rates (such as the United States dollar and the Australian dollar versus the Canadian dollar); risks associated with foreign tax regimes; risks relating to potential litigation; risks relating to the dependence of the Company on outside parties and key management personnel; and risks in the event of a potential conflict of interest.

If any of these risks or uncertainties materialize, or if assumptions underlying the forward looking statements prove incorrect, actual results might vary materially from those anticipated in those forward looking statements. The assumptions referred to above and described in greater detail under *Risks Related to the Company* should be considered carefully by readers.

The Company's forward-looking statements are based on the reasonable beliefs, expectations and opinions of management on the date of this MD&A (or as of the date they are otherwise stated to be made). Although the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. There is no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward looking statements. The Company does not undertake to update or revise any forward-looking statements, except as, and to the extent required by, applicable securities laws in Canada. If the Company updates any forward-looking statement(s), no inference should be drawn that the Company will make additional updates with respect to those or other forward-looking statements.

RISKS RELATED TO THE COMPANY

The operations of the Company are subject to significant uncertainty due to the high-risk nature of its business. The following risks could materially affect the Company's financial condition and/or future operating results and could cause actual events to differ materially from those described in forward-looking statements relating to the Company.

Construction, Development, and Operation of Mines

The success of construction projects and the development and operation of any mines and associated infrastructure, including tailings storage facilities, by the Company is subject to a number of factors including the availability and performance of engineering and construction contractors, mining contractors, suppliers and consultants, the receipt of required governmental approvals and permits in connection with the construction of mining and processing facilities, the timely receipt of assay results to guide selective mining operations, and the conduct of mining operations (including environmental

permits), among other operational elements. Any delay in the performance of any one or more of the contractors, suppliers, consultants or other persons on which the Company is dependent in connection with its activities, a delay in or failure to receive the required governmental approvals and permits in a timely manner or on reasonable terms, or a delay in or failure in connection with the completion and successful operation of the operational elements of a mine could delay or prevent the planned construction, development, commissioning and continued operation of any mines.

There can be no assurance that current or future construction, development and operational plans implemented by the Company will be successful, that the Company will be able to obtain sufficient funds to finance additional construction, development and operational activities, that personnel and equipment will be available in a timely manner or on reasonable terms to successfully complete such projects, that the Company will be able to obtain all necessary governmental approvals and permits or that the construction, development, commissioning and ongoing operating costs associated with the development of new mines will not be significantly higher than anticipated by the Company. Any of the foregoing factors could adversely impact the operations and financial condition of the Company.

The requirements for the production and processing of materials may be affected by, among other things, technological changes, equipment failure, the accuracy of assumptions regarding ground conditions, physical and metallurgical characteristics of mineralized materials, the accuracy of the estimated costs and rates of mining and processing, and capacity of the Company's tailings storage facility. Mining, processing and development activities depend on adequate infrastructure. Reliable roads, bridges and power and water supply are important determinants that affect capital, processing and operating costs. The processing plant which comprises part of the production infrastructure held by Millennium was operational before being placed on care and maintenance in December 2019. The Company completed the refurbishment of the Millennium infrastructure and restarted the processing plant in early 2021, however there can be no assurance that nameplate capacity and treatment rates will be as anticipated or that overall gold recovery will be as expected despite the declaration of commercial production effective October 1, 2021¹⁴. Ongoing operational success will also depend, among other things, on sufficient electricity and water supply, sufficient tailings storage facilities, compliance with existing permits, success in obtaining and complying with further additional environmental and other permitting requirements and on the timing of access to future planned mining areas at the Beatons Creek Project, none of which can be assured. Any of the foregoing risks may materially delay operations, or cause operations to be suspended, and adversely impact the Company's financial condition and results of operations.

The Company's properties have limited operating history upon which to base estimates of future cash flow. The capital expenditures and time required to develop new mines or other projects are considerable and changes in costs or construction schedules can affect project economics. Thus, it is possible that actual costs may change significantly, and economic returns may differ materially from the Company's estimates.

Commercial viability of a new mine or development project is predicated on many factors. Mineral resources projected by technical assessments performed on the properties may not be realized, and the level of future metal prices needed to ensure commercial viability may not materialize. Consequently, there is a risk that the start-up and continued operations of any mine and development project may be subject to write-down and/or closure as they may not be commercially viable.

Mining operations are inherently hazardous and generally involve a high degree of risk. The Company's operations are subject to all of the hazards and risks normally encountered in the exploration, development and production of precious or base metals, including, without limitation, unusual and unexpected geologic formations, seismic activity, rock bursts, cave-ins, flooding and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of, mines and other producing facilities, personal injury or loss of life and damage to tailings dams, property, and environmental damage, all of which may result in possible legal liability. Although the Company expects that adequate precautions to minimize risk will be taken, mining operations are subject to hazards such as fire, rock falls and other geomechanical issues, equipment failure or seepage around or failure of retaining dams around tailings disposal areas which may result in environmental pollution and consequent liability. The occurrence of any of these events could result in a prolonged interruption of the Company's operations that would have a material adverse effect on its business, financial condition, results of operations and prospects. Further, the Company may be subject to liability or sustain losses in relation to certain risks and hazards against which it cannot insure or for which it may elect not to insure. The occurrence of operational risks and/or a shortfall or lack of insurance coverage could have a material adverse impact on the Company's future cash flows, earnings, results of operations and financial condition.

No Prefeasibility or Feasibility Study for the Beatons Creek Project

The Board ratified management's recommendation to mine the Beatons Creek Project. The decision by the Company to produce at the Beatons Creek Project was not based on a pre-feasibility or feasibility study and no mineral reserves demonstrating economic and technical viability have been defined for the project. As a result, there is an increased uncertainty of achieving any particular level of recovery of minerals or the cost of such recovery, including increased risks associated with developing a commercially mineable deposit. Historically, such projects have a much higher risk of economic and technical failure. There is no guarantee that anticipated production costs will be achieved. Failure to achieve the anticipated production costs would have a material adverse impact on the Company's cash flow and future profitability. Commercial production was declared by the Company to have occurred on October 1, 2021¹⁴. However, the Company cautions that the declaration of commercial production only indicates that the Beatons Creek Project was operating at anticipated and sustainable physical levels and it does not indicate that economic results will be realized.

The Company has published the preliminary economic assessment in respect of the Beatons Creek Project (the "PEA"). The PEA is preliminary in nature, and is based on a mineral resource estimate that includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. There is no certainty that the PEA will be realized.

Permitting and License Risks

In the ordinary course of business, the Company will be required to obtain and renew governmental licences or permits for the operation and expansion of the Beatons Creek Project, particularly the Fresh component of the mineral resource estimate, or for the development, construction and commencement of mining at any of the Company's mineral resource properties, including other areas of the Beatons Creek Project. Obtaining or renewing the necessary governmental licences or permits is a complex and time-consuming process involving numerous jurisdictions, public hearings, and costly permitting and other legal undertakings on the part of the Company.

In Australia, as with many jurisdictions, there are various federal, state and local laws governing land, power and water use, the protection of the environment, development, occupational health and safety, waste disposal and appropriate handling of toxic substances. Such operations and exploration activities are also subject to substantial regulation under these laws by governmental agencies and require the Company to obtain permits from various governmental agencies.

Exploration generally requires one form of permit while development and production operations require numerous additional permits. There can be no assurance that all permits which the Company may require for future exploration or development, or ongoing operation of the Beatons Creek Project, will be obtainable at all or on reasonable terms. In addition, future changes in applicable laws or regulations could result in changes in legal requirements or in the terms of existing permits applicable to the Company or its properties. This could have a negative effect on the Company's exploration activities or the Company's ability to develop and operate its properties, including the Beatons Creek Project.

The duration and success of the Company's efforts to obtain and renew licences or permits are contingent upon many variables not within the Company's control, including the interpretation of applicable requirements implemented by the licensing authority, delays in processing of the Company's permitting submissions, and a lack of available resources within regulatory departments to review the Company's permitting submissions in a timely manner. The Company may not be able (and no assurances can be given with respect to its ability) to obtain or renew licences or permits that are necessary to conduct operations at the Company's property interests, including, without limitation, exploitation, operations, and environmental licences. Also, the cost to obtain or renew licences or permits may exceed what the Company believes can be recovered from its property interests if they are put into production. Any unexpected refusals of required licences or permits or delays or costs associated with the licensing or permitting process could prevent or delay the development or impede the operation of a mine, which could adversely impact the Company's operations and profitability.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment or other remedial actions.

The Company also cannot be certain what conditions will be attached to such permits and licences or whether the Company will be able to fulfil such conditions. Further, any additional future laws and regulations, changes to existing laws and regulations (including, but not restricted to, the imposition of higher licence fees, mining royalties or taxes) or more stringent enforcement or restrictive interpretation of current laws and regulations by governmental authorities, or of rulings or clearances obtained from such governmental authorities, could cause additional expenditures (including capital expenditures) to be incurred or impose restrictions on, or suspensions of, the Company's operations and cause delays in the development of its properties.

Moreover, these laws and regulations may allow governmental authorities and private parties to bring lawsuits based upon damage to or destruction of properties and injury to persons resulting from the environmental, health and safety impacts of the Company's past and current operations, and could lead to the imposition of substantial fines, penalties or other civil or criminal sanctions. The occurrence of any of these factors may have a material adverse effect on the Company's business, results of operations and financial condition and the price of the Common Shares.

Native Title and Aboriginal Heritage

Native title claims and Aboriginal heritage issues, including access to tenure, may affect the ability of the Company to pursue exploration, development and mining on Australian properties. Although to date the Company has been able to negotiate commercially reasonable and acceptable arrangements with Aboriginal title claimants, Aboriginal title holders, and land owners where the Company operates, including heritage agreements to access tenements for exploration efforts, there can be no assurance that claims will not be lodged in the future, including upon expiry of current tenure, which may impact the Company's ability to effectively operate in relevant geographic areas or at all. The resolution of native title and Aboriginal heritage issues is an integral part of exploration and mining operations in Australia and the Company is committed to actively managing any issues that may arise. However, in view of the inherent legal and factual uncertainties relating to such issues, no assurance can be given that material adverse consequences will not arise.

There can be no assurance that access to tenure which the Company may require for future exploration, operation, or possible future development will be obtainable in a timely manner or at all or on reasonable terms. The Company also cannot be certain what conditions will be attached to such access or whether the Company will be able to fulfil conditions required by the relevant Aboriginal title claimants. Further, any additional future laws and regulations regarding Aboriginal title, changes to existing laws and regulations regarding Aboriginal title (including, but not restricted to, the imposition of higher licence fees or mining royalties) or more stringent enforcement or restrictive interpretation of current laws and regulations by governmental authorities and Aboriginal title claimants regarding Aboriginal title, or of rulings or clearances obtained from such Aboriginal title claimants, could cause additional expenditures (including capital expenditures) to be incurred or impose restrictions on, or suspensions of, the Company's operations and cause delays in the development of its properties. Moreover, these laws and regulations regarding Aboriginal title may allow Aboriginal title claimants and private parties to bring lawsuits based upon damage to or destruction of properties and injury to persons resulting from the environmental, health and safety impacts of the Company's past and current operations, and could lead to the imposition of substantial fines, penalties or other civil sanctions. The occurrence of any of these factors may have a material adverse effect on the Company's business, results of operations and financial condition and the price of the Common Shares.

Water Supply, Management and Availability Challenges

The Company acknowledges the right to clean, safe water and recognizes that access to a reliable water supply is critical to the hygiene, livelihood and environmental health of Novo's host communities. The Company aims to balance its operational water needs to ensure the effective operation of its mines with those of the local Pilbara and Victorian communities and ecosystems. Protecting the quality and quantity of water available to host communities and other users in its catchments is a key component of Novo's sustainability strategy which will be reported upon in Fiscal 2022. Water is a critical input to Novo's mining operations, and the increasing pressure on water resources around the globe due to user demand and climate change requires the Company to consider current and future conditions in its management of water. Water scarcity is an inherent risk in the Pilbara, and rainfall can vary greatly from year to year. Novo's operations in this region face challenges related to limited supply, increased demand, and impacted water in various forms. Conversely, excessive rainfall or flooding may also result in operational difficulties, including geotechnical instability and flooding, increased dewatering demands, and additional water management requirements.

The Company's approach to management of water-related risks is based on a commitment to responsible water use, including assessing, managing and monitoring water risks and controls. Operating facilities and procedures have been designed to mitigate environmental and social impacts, including managing the quality and quantity of the water the Company uses and returns to the environment.

Although the Beatons Creek Project currently has sufficient water rights to cover operational demands, the Company cannot predict the potential outcome of pending or future proceedings or negotiations related to water rights, claims, contracts and uses, which may impact Novo's operations. The loss of water rights for the Beatons Creek Project, in whole or in part, or shortages of water to which Novo has established rights, could impact existing operations or prevent future exploration. In addition, laws and regulations may be introduced in Western Australia which could limit Novo's access to sufficient water resources. All of these events could result in increased costs or disruptions that may impact Novo's production, which in turn could adversely affect the Company's results of operations and financial position.

On August 8, 2022, the EPA's decision to not assess the Company's Beatons Creek Project submission regarding the Fresh mineralization component was appealed by a local proponent who is seeking to address a limited number of questions relating to potential impacts to groundwater in the Nullagine area. The Company has all technical information readily available to confidently address these questions and is preparing a response to this appeal and expects to resolve it in due course. Importantly, in the case of an appeal against a decision by the EPA to not assess a proposal, the original decision not to assess stands until the appeal is determined. As such, the Company will continue to engage with DMIRS to seek approval to mine the Beatons Creek Fresh mineral resource and expects to make a final investment decision post receipt of results of the Feasibility Study.

Dependence on Future Financing

Although the Company believes that it currently has access to sufficient funding for its planned operations at its Beatons Creek Project and other properties, there can be no assurance that the Company will have the funds required to carry out all of its business plans or that those expenditures will prove profitable. Obtaining additional financing would be subject to a number of factors, including market prices for minerals and commodities, investor acceptance of the Company's properties and investor sentiment. These factors may make the timing, amount, terms or conditions of additional financing unavailable to the Company. The most likely source of future funds presently available to the Company is through equity or debt financings. Any sale of share capital will result in dilution to existing shareholders.

Dependence on Key Management Personnel

The Company is dependent upon a number of key management personnel. The Company's ability to manage its operating, development, exploration and financing activities will depend in large part on the efforts of these individuals. As the Company's business grows, it will require additional key financial, administrative, mining, marketing and public relations personnel as well as additional staff for operations. The Company faces intense competition for qualified personnel, and there can be no assurance that the Company will be able to attract and retain such personnel, particularly considering the current demand for labour in Western Australia and COVID-19 related international and inter-state travel restrictions. The loss of the services of one or more key employees or consultants or the failure to attract and retain new personnel could have a material adverse effect on the Company's ability to manage and expand the Company's business.

COVID-19

The COVID-19 outbreak was declared a pandemic by the World Health Organization on March 11, 2020.

The outbreak and the response of various governments in dealing with the pandemic is interfering with general activity levels within the community, the economy and financial markets worldwide, including the Company's operations and the operations of the companies in which the Company has invested. Restrictions on travel and the limited ability to have meetings with personnel, vendors and service providers have had, and may continue to have, an adverse effect on the Company's operations. The scale and duration of these developments remain uncertain as at the date of this MD&A, but they may have an impact on the Company's future cash flows. The Company notes that the value of certain assets, in particular the fair value of marketable securities recorded in the statement of financial position in the Company's Q2 Financial Statements, determined by reference to fair or market values at June 30, 2022, may have materially changed by the date of this MD&A.

The COVID-19 pandemic, including without limitation, the occurrence of new variants of the virus, has also caused, and is likely to continue to cause, severe economic, market and other disruptions worldwide. It is not possible to estimate the impact of the outbreak's near-term and longer-term effects or governments' varying efforts to combat the outbreak and support businesses.

There can be no assurance that conditions in the global financial markets will not continue to deteriorate as a result of the pandemic, or that the Company's access to capital and other sources of funding will not become constrained, all of which could adversely affect the availability and terms of any future financings the Company undertakes.

Since opening its borders to domestic and international travelers in March 2022, Western Australia has experienced community spread of COVID which is affecting the Company's workforce and operations. Mandatory isolation for COVID-positive personnel and close contacts is affecting staffing levels for the Company and its contractors, and supply chain issues are causing costs of production to increase, particularly with respect to fuel and other consumables. There can be no assurance that such conditions could adversely affect the Company's ability to operate in a safe manner.

Labour and Employment Matters

Production at the Company's mining operations is dependent upon the efforts of its employees and the Company's operations would be adversely affected if it fails to maintain satisfactory labour relations. Factors such as work slowdowns or stoppages caused by high turnover, loss of key staff, and difficulties in recruiting qualified geologists and miners and hiring and training new geologists and miners could materially adversely affect the Company's business. This would have a negative effect on the Company's business and results of operations, which might result in the Company not meeting its business objectives.

Western Australia is continuing to experience a surge in mining activity and operations, which has created significant demand for trained geologic, mining, and support staff. While the Company has sufficient skilled staff to carry on operations and there are currently no material labour shortages with the Company operating near its budgeted staffing levels, the Company may not be able to retain its staff. Loss of staff may have a material adverse effect on the Company's business, results of operations and financial condition.

In addition, relations between the Company and its employees may be affected by changes in the scheme of labour relations that may be introduced by the relevant governmental authorities in whose jurisdictions the Company carries on business. Changes in such legislation or in the relationship between the Company and its employees may have a material adverse effect on the Company's business, results of operations and financial condition.

Risks Related to the amended Credit Facility and Indebtedness

The amended Credit Facility has usual and customary covenants to keep the facility in good standing, including, but not limited to, repayment of the principal advanced thereunder and accrued interest, maintenance and provision of regular and up-to-date financial reports, compliance with all applicable laws and applicable securities legislation, obligation to provide notice of material events, and obligation to maintain secured assets and insurance thereon.

The amended Credit Facility also contains restrictive covenants that will limit the Company's ability to engage in activities that may be in the Company's long-term best interest. If the Company defaults in respect of its obligations under the amended Credit Facility, full repayment of amounts funded under the Credit Facility may be demanded and the Company may lose the shares of certain of its international subsidiaries (which are pledged as collateral under the amended Credit Facility) and other property securing its obligations under the amended Credit Facility, all of which would have a material effect on the Company's operations. The available funding under the amended Credit Facility is currently fully drawn down. To the extent the Company incurs additional debt, the risks related to the Company's indebtedness could increase.

The Company's level of indebtedness and the terms thereof will have several important effects on its future operations, including, without limitation, that it:

- will require the Company to dedicate a portion of its cash flow from operations, if any, and under the terms of the amended Credit Facility other proceeds from divestitures, financings and insurance claims, to the payment of principal and interest on the Company's outstanding indebtedness, thereby reducing the funds available to it for operations and any future business opportunities;
- could increase the Company's vulnerability to adverse changes in general economic and industry conditions, as well as to competitive pressure;
- could decrease the Company's flexibility in planning for and reacting to changes in the industry in which it competes and place the Company at a disadvantage compared to other, less leveraged competitors; and
- depending on the levels of its outstanding debt, could increase the Company's cost of borrowing and/or limit the Company's ability to obtain additional financing for working capital, capital expenditures, general corporate and other purposes or require the Company to make other divestitures.

The Company's ability to make payments of principal and interest on its indebtedness depends upon the Company's financial condition, operating performance and expected future revenues, will be subject to prevailing economic conditions, competitive conditions, changes in the applicable interest rate, industry cycles and financial, business, legislative, regulatory and other factors affecting its operations, many of which are beyond the Company's control. If the Company's revenues are insufficient to, or the

Company cannot raise sufficient funds to, meet its debt service and other obligations in the future, the Company could face substantial liquidity problems and may be required, among other things, to:

- reduce or delay investments and other capital expenditures;
- obtain additional financing in the debt or equity markets;
- refinance or restructure all or a portion of its indebtedness; and/or
- sell selected assets.

The Company cannot provide assurance that such measures will be sufficient to enable the Company to service its debt. In addition, any such financing, refinancing or sale of assets might not be available on economically favourable terms or at all. Any of the foregoing may have a material and adverse effect on the Company's financial condition and results of operations.

Obligations as a Public Company

The Company's business is subject to evolving corporate governance and public disclosure regulations that may from time to time increase both the Company's compliance costs and the risk of non-compliance, which could adversely impact the price of the Common Shares.

The Company is subject to changing securities laws and to rules and regulations promulgated by a number of governmental and self-regulated organizations having jurisdiction over the Company including, but not limited to, the TSX, the OTCQX, and the International Accounting Standards Board. These laws and regulations continue to evolve in scope and complexity creating many new requirements. The Company's efforts to comply with the same could result in increased general and administration expenses and a diversion of management time and attention from revenue-generating activities to compliance activities.

Acquisitions and Integration

From time to time, the Company examines opportunities to acquire additional assets and businesses. Any acquisition that the Company may choose to complete may be of a significant size, may change the scale of the Company's business and operations, and may expose the Company to new geographic, political, operating, financial and geological risks. The Company's success in its acquisition activities depends on its ability to identify suitable acquisition candidates, negotiate acceptable terms for any such acquisition, and integrate the acquired operations successfully with those of the Company. Any acquisitions would be accompanied by risks. For example, there may be a significant change in commodity prices after the Company has committed to complete the transaction and established the purchase price or exchange ratio; a material ore body may prove to be below expectations; the Company may have difficulty integrating and assimilating the operations and personnel of any acquired companies, realizing anticipated synergies and maximizing the financial and strategic position of the combined enterprise, and maintaining uniform standards, policies and controls across the organization; the integration of the acquired business or assets may disrupt the Company's ongoing business and its relationships with employees, customers, suppliers and contractors; and the acquired business or assets may have unknown liabilities which may be significant and may include risk of future prosecution against which the Company may have limited legal defense options. In the event that the Company chooses to raise debt capital to finance any such acquisition, the Company's leverage will be increased. If the Company chooses to use equity as consideration for such acquisition, existing shareholders may experience dilution. Alternatively, the Company may choose to finance any such acquisition with its

existing resources. There can be no assurance that the Company would be successful in overcoming these risks or any other problems encountered in connection with such acquisitions.

Market Price of Securities

Over the last several years, the securities of many resource companies have experienced a high level of price and volume volatility and wide fluctuations in market price that have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. Factors unrelated to the financial performance or prospects of the Company include macroeconomic developments locally and globally and market perceptions of the attractiveness of particular industries. There can be no assurance that continued fluctuations in market prices will not occur.

As a result of any of these factors, the market price of the securities of the Company at any given point in time may not accurately reflect the Company's long-term value. In the past, following periods of volatility in the market price of a company's securities, shareholders have instituted class action securities litigation against those companies. Such litigation, if instituted, could result in substantial cost and diversion of management attention and resources, which could significantly harm profitability and the reputation of the Company.

A decline in the Company's market capitalization may require the Company to write-down the carrying value of the Company's assets.

Community Relations

The Company's relationships with the communities in which it operates and other stakeholders are critical to ensure the future success of its existing operations and the construction and development of its projects. There is an increasing level of public concern relating to the perceived effect of exploration and mining activities on the environment and on communities impacted by such activities. Publicity adverse to the Company, its operations or extractive industries generally, could have an adverse effect on the Company and may impact relationships with the communities in which the Company operates and other stakeholders.

While the Company is committed to operating in a socially responsible manner, there can be no assurance that its efforts in this respect will mitigate this potential risk. Further, damage to the Company's reputation can be the result of the perceived or actual occurrence of any number of events, and could include any negative publicity, whether true or not. The increased usage of social media and other web-based tools used to generate, publish and discuss user-generated content and to connect with other users has made it increasingly easy for individuals and groups to communicate and share opinions and views in regards to the Company and its activities, whether true or not. While the Company strives to uphold and maintain a positive image and reputation, the Company does not ultimately have control over how it is perceived by others. Reputation loss may lead to increased challenges in developing, maintaining community relations and advancing its projects and decreased investor confidence, all of which may have a material adverse impact on the financial performance and growth of the Company.

The Speculative Nature of the Exploration of Natural Resource Properties

While the discovery of a commercially viable ore body may result in substantial rewards, few mineral properties that are explored are ultimately developed into producing mines. There is no assurance that any of the claims the Company will explore or acquire will contain commercially exploitable reserves of minerals. Exploration for natural resources is a speculative venture involving substantial risk. Even a combination of careful evaluation, experience and knowledge may not eliminate such risk. Hazards such as unusual or unexpected geological formations, formation pressures, cyclones, fires, power outages, labour disruptions, flooding, cave-ins, landslides and the inability of the Company to obtain suitable machinery, equipment or labour due to industry disruptions or general shortages are all risks involved with the conduct of exploration programs and the operation of mines. While appropriate precautions to mitigate these risks have been taken or are planned to be taken, operations are subject to hazards such as equipment failure or failure of structures which may result in environmental pollution and consequent liability. Even though the Company intends to maintain liability insurance in an amount which it considers adequate, the nature of these risks is such that liabilities might exceed policy limits, the liabilities and hazards might not be insurable or the Company might not elect to insure itself against such liabilities due to high premium costs or other reasons, in which event the Company could incur significant costs that could have a material adverse effect upon its financial condition.

Reclamation Costs

In the context of environmental permits, including the approval of reclamation plans, the Company must comply with standards, laws and regulations that may entail costs and delays depending on the nature of the activity to be permitted and how stringently the regulations are implemented by the regulatory authority. The reclamation liability on any of the Company's properties will be calculated based on current laws and regulations and the expected future costs to be incurred in reclaiming, restoring and closing its exploration or operating mine sites. The Company may incur costs associated with reclamation activities, which may materially exceed the provisions established by the Company for the activities. In addition, possible additional future regulatory requirements may require additional reclamation requirements creating uncertainties related to future reclamation costs. Should the Company be unable to post required financial assurance related to an environmental remediation obligation, the Company might be prohibited from starting planned operations or enter into interim compliance measures pending completion of the required remedy, which could have a material adverse effect. Furthermore, changes to the amount of financial assurance that the Company is required to post, as well as the nature of the collateral to be provided, could significantly increase the Company's costs, making the maintenance and development of new mines less economically feasible.

Although the Company has currently made provisions for its reclamation obligations at the Beatons Creek Gold Project and NGP and is assessing provisions for the reclamation obligations from other properties, there is no assurance that these provisions will be adequate in the future. The provision required is expected to increase significantly through negotiation with regulatory authorities as the Beatons Creek Project is further operated and developed. There can be no guarantee that the Company will have sufficient capital resources to cover the costs of reclamation when they become due and payable. The Company is currently engaged in discussions with DMIRS and DWER in Western Australia, with respect to its closure plan for the Beatons Creek Project, to account for any future changes to the site through production. Only an initial amount of required reclamation work has been completed as at the date hereof.

Failure to provide regulatory authorities with the required information could potentially result in the closure of the Company's operations, which could result in a material adverse effect on its operating results and financial condition.

Nature and Climatic Conditions

The Company has properties located in Western Australia, Australia. Typically, the Western Australian's tropical wet season is from the end of November to the end of March. During the wet season, the properties may be subject to unpredictable weather conditions such as cyclones, heavy rains, strong winds and flash flooding. During the summer, the properties may be subject to unpredictable weather conditions such as extended dry periods and bush fires. The Company has undertaken several steps to minimize the effects of the wet and dry seasons on its operations including planning exploration and mining activities around said seasons. Nonetheless, no assurance can be given that the unpredictable weather conditions will not adversely affect exploration activities.

Furthermore, the occurrence of physical climate change events may result in substantial costs to respond to the event and/or recover from the event, and to prevent recurrent damage, through either the modification of, or addition to, existing infrastructure at the Company's operations. The scientific community has predicted an increase, over time, in the frequency and severity of extraordinary or catastrophic natural phenomena as a result of climate change. The Company can provide no assurance that it will be able to predict, respond to, measure, monitor or manage the risks posed as a result.

The Company's mining and processing operations are, in some instances, energy intensive. The Company acknowledges climate change is an international and community concern. Legislation and regulations relating to emission levels and energy efficiency are becoming more rigorous and may result in increased costs at its operations. In addition, as climate change is increasingly perceived as an international and community concern, stakeholders may increase demands for emissions reductions and call-upon mining companies to better manage their consumption of climate-relevant resources. While the Company takes measures to manage the use of energy, such regulatory requirements may have an adverse impact on the Company.

Physical climate change events, and the trend toward more stringent regulations aimed at reducing the effects of climate change, could impact the Company's decisions to pursue future opportunities, or maintain existing operations, which could have an adverse effect on its business and future operations.

The Company can provide no assurance that efforts to mitigate the risks of climate changes will be effective and that the physical risks of climate change will not have an adverse effect on its operations and profitability.

Information Technology

The Company is reliant on the continuous and uninterrupted operations of its information technology ("IT") systems. User access and security of all IT systems are critical elements to the operations of the Company. The Company's operations depend, in part, on how well the Company and its suppliers protect networks, equipment, IT systems and software against damage from a number of threats, including, but not limited to, cable cuts, damage to physical plants, natural disasters, terrorism, fire, power loss, hacking, computer viruses, vandalism and theft.

The Company's operations also depend on the timely maintenance, upgrade and replacement of networks, equipment, IT systems and software, as well as pre-emptive expenses to mitigate the risks of failures. Any IT failure pertaining to availability, access or system security could result in disruption for personnel and could adversely affect the reputation, operations or financial performance of the Company.

The Company's IT systems could be compromised by unauthorized parties attempting to extract business sensitive, confidential or personal information, corrupting information or disrupting business processes or by inadvertent or intentional actions on the part of the Company's employees or vendors. A cyber security incident resulting in a security breach or failure to identify a security threat, could disrupt business and could result in the loss of business sensitive, confidential or personal information or other assets, as well as litigation, regulatory enforcement, violation of privacy and security laws and regulations and remediation costs.

Although, to date, the Company has not experienced any material losses relating to cyber-attacks or other information security breaches, there can be no assurance that it will not incur such losses in the future. The Company's risk and exposure to these matters cannot be fully mitigated because of, among other things, the evolving nature of these threats. As a result, cyber security and the continued development and enhancement of controls, processes and practices designed to protect systems, computers, software, data and networks from attack, damage or unauthorized access remain a priority. As cyber threats continue to evolve, the Company may be required to expend additional resources to continue to modify or enhance protective measures or to investigate and remediate any security vulnerabilities.

Insurance and Uninsured Risks

The Company's business is subject to a number of risks and hazards generally, including: adverse environmental conditions; industrial accidents; unusual or unexpected geological conditions; ground failures; changes in the regulatory environment; and natural phenomena such as inclement weather conditions, floods and earthquakes. Such occurrences could result in damage to mineral properties, including but not limited to the Beatons Creek Project and associated infrastructure, personal injury or death, environmental damage to the Company's properties or the properties of others, monetary losses and possible legal liability.

The businesses and properties of the Company are insured against loss or damage, subject to a number of limitations and qualifications. Such insurance will not cover all the potential risks associated with an exploration company's operations. The Company may also be unable to maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration is not generally available to the Company or to other companies in the exploration industry on acceptable terms. The Company might also become subject to liability for pollution or other hazards that it may not be insured against or that the Company may elect not to insure against because of premium costs or other reasons. The Company may suffer a material adverse effect on its business, results of operations, and financial position if it incurs a material loss related to any significant event that is not covered, or adequately covered, by its insurance policies.

Dependence on Principal Exploration Stage Projects

The Company currently carries out exploration activities on several properties, but is focused on the NGP, Egina, and Karratha properties. These properties may never develop into commercially viable deposits, which would have a material adverse effect on the Company's potential mineral resource production, profitability, financial performance and results of operation.

Previous Work on the Egina, Beatons Creek, and Karratha Properties May Give Rise to Environmental Liabilities

There can be no assurance that historic (prior to the Company's ownership) activities on the Egina, Beatons Creek, and Karratha Properties, as well as on tenements held by Millennium, were conducted in full compliance with the various government and environmental regulations required under the Australian mining regime.

To the extent that any of the activities were not in compliance with applicable environmental laws, regulations and permitting requirements, enforcement actions thereunder, including orders of regulatory or judicial authorities, may be taken against the Company as a result of its interest in the Egina, Beatons Creek, and Karratha Properties, and on tenements held by Millennium. Any such actions or orders may cause increases in expenses, capital expenditures or production costs or reduction in levels of production, or require abandonment or delays.

Negative Operating Cash Flow

The Company has generally incurred losses since inception and may continue to incur losses as it proceeds with exploration and development of its mineral properties while operating the Beatons Creek Project. The Company's efforts to date have been focused on acquiring and exploring its mineral properties. All but one of the Company's properties are in the exploration stage and none have mineral reserves.

The Company has only recently begun the production of gold and silver from its Beatons Creek Project and has significant cash requirements to meet its exploration and development commitments and administrative overhead, and to maintain its mineral interests. The Company will continue to incur losses in respect of the Beatons Creek Project until it generates sufficient revenue to fund continuing operations. There can be no assurance that problems will not be encountered at the Beatons Creek Project that result in mining operations not being profitable. If this occurs, additional funds will need to be raised.

Uncertainty in Global Markets and Economic Conditions

There remains considerable volatility in global markets and economic conditions together with the volatility in the price of gold and in the availability and price of critical supplies, including fuel. This continues to generate uncertainty for the mining sector worldwide.

As discussed above, the Company has and will continue to rely on the capital markets for necessary capital expenditures.

As a result, the business, financial condition and operations of the Company could be adversely affected by: (i) continued disruption and volatility in financial markets; (ii) continued capital and liquidity

concerns regarding financial institutions generally and hindering the Company's counterparties specifically; (iii) limitations resulting from governmental action in an effort to stabilize or provide additional regulation of the financial system; or (iv) recessionary conditions that are deeper or last longer than currently anticipated.

Price of Gold

The Company's profitability and long-term viability depend, in large part, upon the market price of gold. Metal prices fluctuate widely and are affected by numerous factors beyond the Company's control, including global and regional supply and demand for industrial products containing metals generally; changes in global or regional investment or consumption patterns; increased production due to new mine developments and improved mining and production methods; decreased production due to mine closures; interest rates and interest rate expectation; expectations with respect to the rate of inflation or deflation; currency rate fluctuations; availability and costs of metal substitutes; global or regional political or economic conditions; and sales by central banks, holders, speculators and other producers of metals in response to any of the above factors.

There can be no assurance that metal prices will remain at current levels or that such prices will improve. A decrease in the market prices could adversely affect the profitability of the Company's existing mines and projects as well as its ability to finance the exploration and development of additional properties, which would have a material adverse effect on the Company's results of operations, cash flows and financial position. A decline in metal prices may require the Company to write-down mineral resource estimates (or mineral reserve estimates if ever established in the future), which could result in material write-downs of investments in mining properties. Further, if revenue from metal sales declines, the Company may experience liquidity difficulties. Its cash flow from mining operations may be insufficient to meet its operating needs, and as a result the Company could be forced to discontinue production and could lose its interest in, or be forced to sell, some or all of its properties.

Joint Ventures

The Company is and will be subject to the risks normally associated with the conduct of joint ventures, which include disagreements as to how to develop, operate and finance a project, inequality of bargaining power, incompatible strategic and economic objectives and possible litigation between the participants regarding joint venture matters. These matters may have an adverse effect on the Company's ability to realize the full economic benefits of its interest in the property that is the subject of a joint venture, which could affect its results of operations and financial condition as well as the price of the Company's Common Shares.

Danger of Exploration and Development Activities

Exploration and development activities involve various types of risks and hazards, including but not limited to:

- environmental hazards;
- industrial accidents;
- metallurgical and other processing problems;
- unusual or unexpected rock formations;

- structural cave-ins or slides;
- flooding and fires; and
- periodic interruptions due to inclement or hazardous weather conditions.

These risks could result in damage to, or destruction of, mineral properties or other properties; personal injury; environmental damage; delays in activities; monetary losses; and possible legal liability. The Company may not be able to obtain insurance to cover these risks at economically feasible premiums. Insurance against certain environmental risks, including potential liability for pollution or other hazards as a result of the disposal of waste products occurring from production, is not generally available to the Company or to other companies within the mining industry. The Company may suffer a material adverse impact on its business if it incurs losses related to any significant events that are not covered by its insurance policies.

Exploration and Mining Tenements May be Subject to Forfeiture

The Australian title registration system provides for application for forfeiture of exploration and mining licences where there is, or has been, non-compliance with the prescribed royalties, rents or expenditure conditions. Forfeiture may occur in one of a number of ways.

A third party may file a plaint (an application for forfeiture) with the mining warden, who may (in the case of prospecting or miscellaneous licences) elect to forfeit the tenement or impose a fine not exceeding AUD \$10,000 for non-compliance with expenditure conditions and not exceeding AUD \$50,000 in any other case, or (in the case of exploration licences, mining and general purpose leases) make a recommendation to the Minister for Mines and Petroleum; Energy; Industrial Relations (the “Minister”) for or against forfeiture.

In the latter case, the Minister may decide to forfeit the tenement, impose a fine not exceeding AUD \$50,000 per tenement, or impose no penalty. A tenement may not be forfeited or recommended for forfeiture unless non-compliance is of sufficient gravity to justify forfeiture. Alternatively, the Minister may himself institute forfeiture measures where non-compliance has occurred (or impose a fine not exceeding AUD \$50,000 per tenement which, if unpaid, results in deemed forfeiture).

Uncertainty in the Estimation of Mineral Resources and Mineral Reserves

Mineral resources that are not mineral reserves do not have demonstrated economic viability. The Company’s publicly disclosed mineral resource figures contained in this MD&A are estimates only and no assurance can be given that these will ever be upgraded to higher categories of mineral resources or to mineral reserves. Even if mineral reserves are established in the future, there is no assurance that the anticipated tonnages and grades will be achieved, that the indicated level of recovery will be realized or that mineral reserves will be mined or processed profitably. Actual mineral resources may not conform to geological, metallurgical or other expectations, and the volume and grade of mineralized material recovered may differ from estimated levels. There are numerous uncertainties inherent in estimating mineral resources and mineral reserves, including many factors beyond the Company’s control. Such estimation is a subjective process, and the accuracy of any mineral resource or mineral reserve estimate is a function of the quantity and quality of available data and of the assumptions made and judgments used in engineering and geological interpretation.

Short-term operating factors relating to the Company's mineral resources (and mineral reserves if ever established in the future), such as the need for orderly development of the mineralized material or the processing of new or different mineralized material grades, may cause the mining operation to be unprofitable in any particular accounting period. In addition, there can be no assurance that gold recoveries in small scale laboratory tests will be duplicated in larger scale tests under on-site conditions or during production.

Lower market prices, increased production costs, reduced recovery rates and other factors may result in a revision of mineral resource estimates from time to time or may render the Company's mineral resource uneconomic to exploit. Mineral resource data is not indicative of future results of operations. If the Company's actual mineral resources (and mineral reserves if ever established in the future) are less than current estimates or if the Company fails to develop its mineral resource base through the realization of identified mineralized potential, its results of operations or financial condition may be materially and adversely affected.

Evaluation of mineral resources occurs from time to time and estimates of mineral resources (and mineral reserves if ever established in the future) may change depending on further geological interpretation, drilling results and metal prices, which could have a negative effect on the Company's operations. The category of inferred mineral resource is the least reliable mineral resource category and is subject to the most variability. Due to the uncertainty which may attach to inferred mineral resources, there is no assurance that inferred mineral resources will be upgraded to an indicated or measured mineral resource category as a result of continued exploration. There is no certainty that any mineral resources (or mineral reserves, if any) identified on any of the Company's properties will in fact be realized or will ever qualify as a commercially mineable (or viable) deposit which can be legally and economically exploited. Until a deposit is actually mined and processed, the quantity of mineral resources (or mineral reserves, if any) and grade must be considered as estimates only and the Company may ultimately never realize production on any of its properties.

Government Regulation

The Company's business, mining operations and exploration and development activities are subject to extensive federal, territorial and local laws and regulations governing exploration, development, production, exports, taxes, labour standards, waste disposal, protection of the environment, reclamation, historic and cultural resource preservation, mine safety and occupational health, control of toxic substances, reporting and other matters. Although the Company believes that its exploration activities are currently carried out in accordance with all applicable rules and regulations, new rules and regulations may be enacted and existing rules and regulations may be applied in a manner that could limit or curtail production or development of the Company's properties. Amendments to current laws and regulations governing the operations and activities of the Company or more stringent implementation thereof could have a material adverse effect on the Company's business, financial condition and results of operations.

Competition

The mining industry is intensely competitive in all of its phases and the Company competes with many companies possessing greater financial and technical resources than itself. Competition in the precious metals mining industry is primarily for mineral rich properties that can be developed and produced economically; the technical expertise to find, develop, and operate such properties; the labour to

operate the properties; and the capital for the purpose of funding such properties. Many competitors not only explore for and mine precious metals, but also conduct refining and marketing operations on a global basis. Such competition may result in the Company being unable to acquire desired properties, to recruit or retain qualified employees or to acquire the capital necessary to fund its operations and develop its properties. Existing or future competition in the mining industry could materially adversely affect the Company's prospects for mineral exploration and success in the future.

Currency Fluctuations

Currency fluctuations may affect the Company's capital costs and the costs that the Company incurs at its operations. Gold is sold throughout the world based principally on a United States dollar price, but most of the Company's operating and capital expenses are incurred in Australian and Canadian dollars and the Company recognizes revenues in Australian dollars. Changes in these foreign currencies could materially and adversely affect the Company's profitability, results of operations and financial position.

Litigation

All industries, including the mining industry, are subject to legal claims, with and without merit. Legal proceedings arise from time to time in the course of the Company's business. Such litigation may be brought against the Company or one or more of its subsidiaries in the future from time to time or the Company or one or more of its subsidiaries may be subject to another form of litigation. Defense and settlement costs of legal claims can be substantial, even with respect to claims that have no merit. Due to the inherent uncertainty of the litigation process, should a claim be brought against the Company, the process of defending such claims could take away from management time and effort and the resolution of any particular legal proceeding to which the Company or one or more of its subsidiaries may become subject could have a material adverse effect on the Company's financial position and results of operations.

Enforcement of Civil Liabilities

Substantially all of the Company's assets are located outside of Canada and certain of the directors and officers of the Company are or may be resident outside of Canada. As a result, it may be difficult or impossible to enforce judgments granted by a court in Canada against the assets of the Company or the Company's directors and officers residing outside of Canada.

No Cash Dividends on Common Shares

Shareholders should not anticipate receiving cash dividends on the Common Shares. The Company has never declared or paid any cash dividends or distributions on the Common Shares. It is currently expected that the Company will retain future earnings, if any, to support operations and to finance explorations and therefore not pay any cash dividends on the Common Shares in the foreseeable future.

Conflicts of Interest

Certain of the directors and officers of the Company also serve as directors and/or officers of other companies involved in natural resource exploration and development and, consequently, there exists the possibility for such directors and officers to be in a position of conflict.

The Company expects that any decision made by any of such directors and officers involving the Company will be made in accordance with their duties and obligations to deal fairly and in good faith with a view to the best interests of the Company and its shareholders, but there can be no assurance in this regard.

In addition, each of the Company's directors is required to declare and refrain from voting on any matter in which such directors may have a conflict of interest or which are governed by the procedures set forth in the *Business Corporations Act* (British Columbia) and any other applicable law.

The Company's ESG practices and reporting may be considered inadequate which may impact its reputation and/or ability to obtain financing

In the last several years, the importance of environmental, social and governance (“ESG”) performance requirements, standards, and disclosure and reporting of material items has increased significantly across all stakeholder groups. While the Company is advancing its ESG strategy and plans to issue its inaugural sustainability statement in 2022, there is no assurance that the Company will be able to adequately address all ESG related expectations of priority stakeholders.

ESG factors, including climate change, are increasingly becoming a metric for institutional shareholders to review and assess the performance of the Company and a significant factor in investment decisions. The Company is advancing its strategy and framework to manage and monitor ESG matters at its operations and to ensure proper and complete reporting thereof. However, there are no assurances that the Company's efforts will be sufficient or meet all or any of the standards and frameworks set by various ESG analysts or institutional or other investors, or that the Company's efforts will accurately be reported on, which can adversely impact the Company's reputation and valuation. In addition, the Company's ability to obtain future financing or access capital may be impacted by its practices in respect of, and reporting on, ESG matters and the evaluation of the Company's practices by third party rating agencies on ESG matters.

Tax Matters

The Company's taxes are affected by a number of factors, some of which are outside of its control, including the application and interpretation of the relevant tax laws and treaties. If the Company's filing position, application of tax incentives or similar “holidays” or benefits were to be challenged for any reason, this could have a material adverse effect on the Company's business, results of operations and financial condition.

The Company is subject to routine tax audits by various tax authorities. Tax audits may result in additional tax, interest payments and penalties which would negatively affect the Company's financial condition and operating results. New laws and regulations or changes in tax rules and regulations or the interpretation of tax laws by the courts or the tax authorities may also have a substantial negative impact on the Company's business. There is no assurance that the Company's current financial condition will not be materially adversely affected in the future due to such changes.

Foreign Mining Tax Regimes

Mining tax regimes in foreign jurisdictions are subject to differing interpretations and are subject to constant change. The Company's interpretation of taxation law as applied to its transactions and activities may not coincide with that of the tax authorities. As a result, transactions may be challenged by tax authorities and the Company's operations may be assessed, which could result in significant additional taxes, penalties and interest. In addition, proposed changes to mining tax regimes in foreign jurisdictions could result in significant additional taxes payable by the Company, which would have a negative impact on the financial results of Novo.

Disclosure and Internal Controls

Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS. Disclosure controls and procedures are designed to ensure that the information required to be disclosed by the Company in reports filed with securities regulatory agencies is recorded, processed, summarized and reported on a timely basis and is accumulated and communicated to the Company's management, as appropriate, to allow timely decisions regarding required actions. The Company has invested resources to document and analyze its system of disclosure controls and its internal control over financial reporting. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance with respect to the reliability of financial reporting and financial statement preparation. The Company's failure to satisfy the requirements of applicable Canadian securities laws on an ongoing, timely basis could result in the loss of investor confidence in the reliability of its financial statements, which in turn could harm its business and negatively impact the trading price of the Common Shares. In addition, any failure to implement required new or improved controls, or difficulties encountered in their implementation, could harm the Company's operating results or cause it to fail to meet its reporting obligations.
